Rule Builder | RBLD <GO> for Equities, Futures, and Options

RBLD <GO> allows you to automate your *Execution Management System* (EMSX) blotter to achieve a productive, consistent, and timely best execution policy. You can also customize alerts on orders and routes, and autoroute orders to a single broker or to multiple brokers via a broker wheel.

Note: This Help Page explains how to use RBLD for equity and futures orders. For more on using RBLD for fixed income: [RBLD Fixed Income Help Page](#).

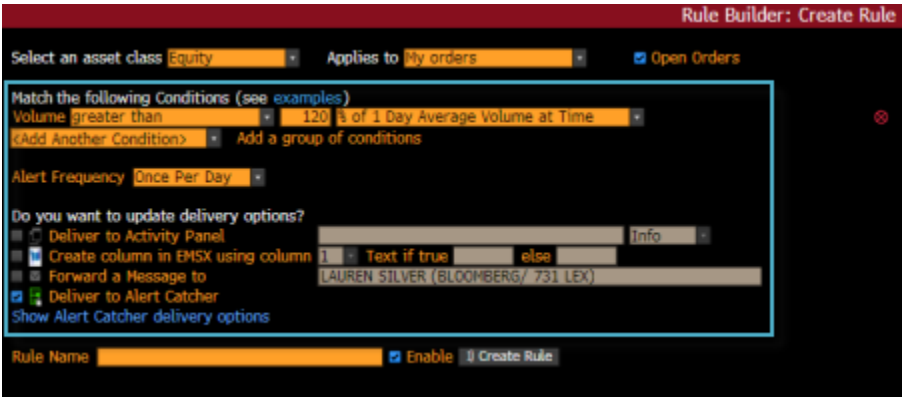

Create Rule ▾		Tools ▾		Rule Builder 📌 ▾	
Alerts		Automation		Custom Auto	
Sort Best		Dealer Group		Allocation	
Backtest		Rule History			
Rule Name		Enabled	Action	Applies To	
1) Acct is ABCD (BETA-290)		☒	Alert Catcher	My orders	
2) FI - Amt >= 1M (BETA)		☒	Alert Catcher	My orders	
3) alexk Uni GTC		☒	Alert Catcher	My orders	
4) alexk Uni NEW		☒	Alert Catcher	My orders	
5) alexk Uni Routed Q-TY Changed		☒	Alert Catcher	My orders	

Quick Start

1. From the toolbar, click the **Create Rule** button, then select the type of rule you want to create (e.g., **Alerts**).

2. On the *Create Rule* screen, define the universe of orders you want to include in the rule, then specify the rule action.

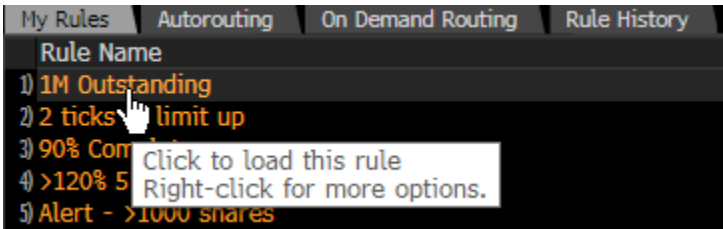

3. In the *Rule Name* field, enter a name for your rule, then click the **Create Rule** button.

Note: Rules are enabled by default. If you want to disable them, deselect *Enable*.

Getting Hints as You Go

On any Bloomberg function, you can mouse over key items for more information:

Workflows

Creating Alert Rules

You can create alert rules to receive a notification when an order or route that meets your conditions comes into your *Execution Management System* (EMSX) blotter.

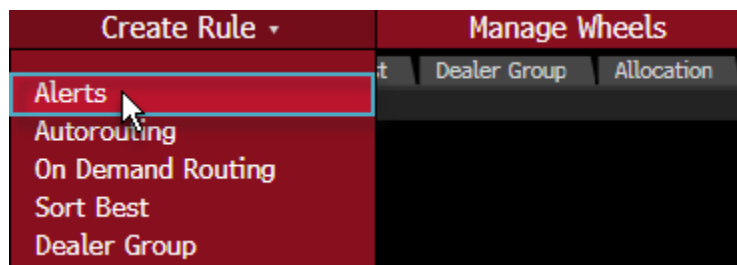

Setting Rule Conditions

You can define which order characteristics will trigger an alert. You can also create more complex rules for alerts using a combination of single conditions and condition groups. The rule conditions you set are for orders routed through the *Execution Management System* (EMSX) function.

Note: When creating an alert rule for equities, you can select conditions using an autocomplete search bar. For more: [Searching for Conditions](#).

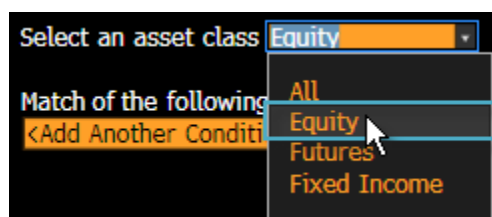

Steps:

1. On the main *Rule Builder* screen, from the toolbar, click the **Create Rule > Alerts**.

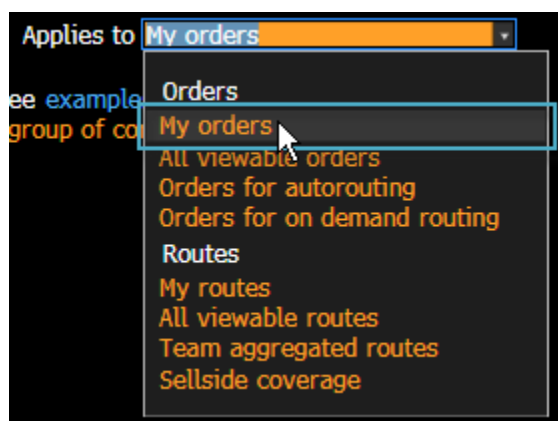

The *Create Rule* screen appears.

2. From the *Asset Class* drop-down menu, select the asset class to which you want the rule to apply (e.g., *Equity*).

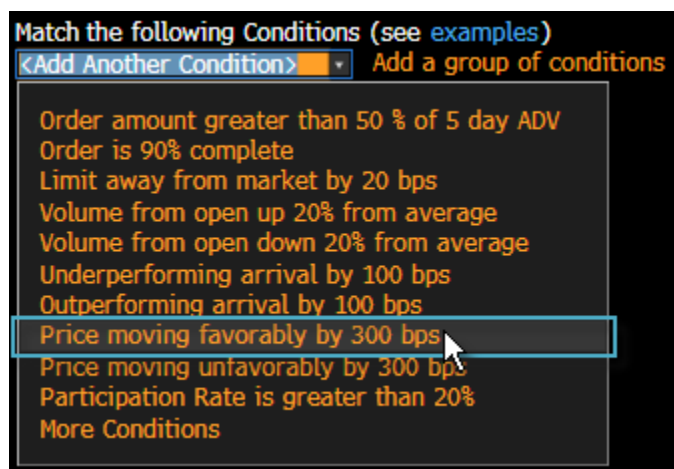

3. From the *Applies To* drop-down menu, select the scope of the rule (e.g., *My Orders*).

Note: You can only apply rules to team aggregated orders/routes if you are a team administrator. *Team Aggregated Routes* refers to the sum of all routes on a team.

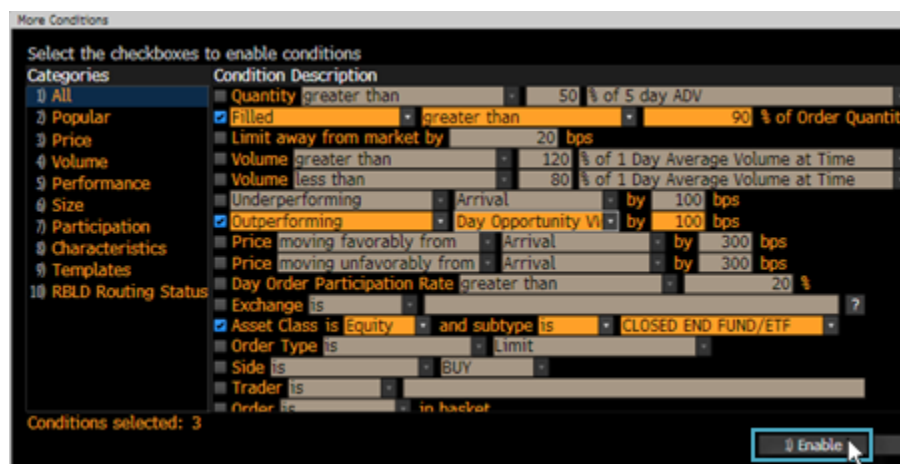

4. To quickly create a rule based on the most popular conditions, from the *Match the Following Conditions* drop-down menu, select a condition (e.g., *Price moving favorably by 300 bps*).

Note: You can change the condition values once they are added to your rule. For example, in the *bps* field, you can modify the size of the move that triggers the alert by entering a new value (e.g., 200).

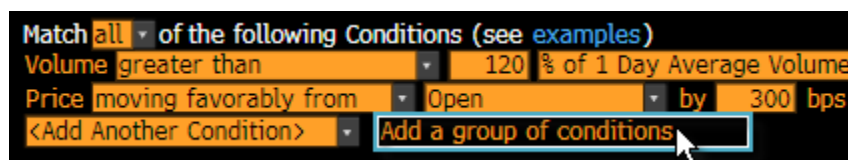

The fields and drop-down menus that appear depend on the asset class and order type you selected.

5. If you want to see more examples, from the *Match the Following Conditions* drop-down menu, select **More Conditions**, select your conditions from the window that appears, then click the **Enable** button.

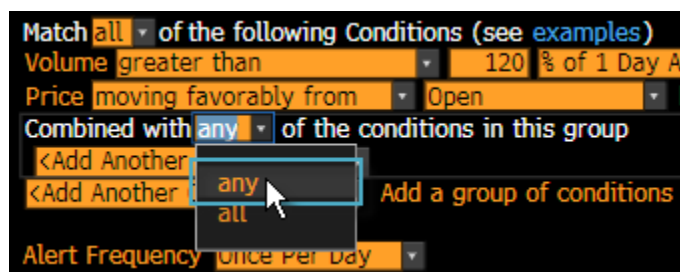

The conditions are added to your rule.

6. If you want to create a group of conditions that will be evaluated as a unit:
 - a. Click **Add a group of conditions**.

- b. To specify whether the mandatory conditions must be combined with any or all of the conditions in the group, from the drop-down menu, select **Any** or **All**.

c. From the *Add Another Condition* drop-down menu, select your condition(s), then specify the relevant values.

7. If you want to delete a condition or group of conditions from your rule, click the red delete icon.

The condition or condition group disappears.

8. Specify the rule actions. For more: [Setting Rule Actions](#).

9. In the *Rule Name* field, enter a name for the rule, then click the **Create Rule** button.

[Hint] Rules are enabled by default. If you do not want to immediately enable the rule, deselect *Enable*.

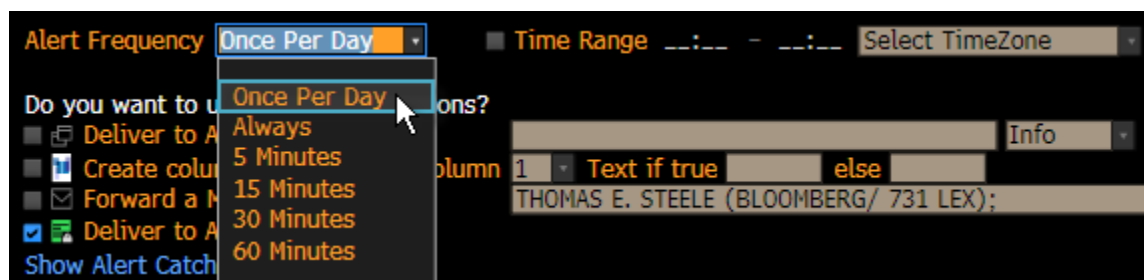

The rule saves.

Setting Rule Actions

Once you have set rule conditions, you can set alerts that let you know when those conditions are met. For example, you can attach a tag to orders/routes in the *Execution Management System (EMSX)* function. This allows you to quickly sort your blotter by specific types of orders/routes. You can also create a pop-up alert that appears in your *EMSX Activity Panel*.

Steps:

1. On the top of the *Create Rule* screen, specify the conditions that must be met for the rule to be applied. For more: [Setting Rule Conditions](#).
2. From the *Alert Frequency* drop-down menu, specify how frequently you want to receive alerts related to the rule (e.g., *Once Per Day*).

Note: You can select the **Time Range** field to receive only those alerts that are triggered in the specified time range. This does not apply to alerts on company data, ratings, recommendations, or index members.

3. In the *Do you want to update delivery options?* section, select one or more of the following:

- **Deliver to Activity Panel:** Displays a custom pop-up message in your EMSX Activity Panel.
- **Create column in EMSX using column:** Creates a column in your EMSX blotter that displays a tag you create. You can create up to five tags and specify the columns in which they appear (*RBLD1* through *RBLD5*). There are five columns for orders and five columns for routes. For more on configuring your EMSX blotter: [EMSX Help Page > Customizing Blotter](#).

Note: Two rules that place a tag in the same column cannot be active at the same time.

- **Forward a Message to:** Sends a message to Bloomberg e-mail addresses via the *Message* (MSG) function. For more on using MSG: [MSG Help Page](#).
- **Deliver to Alert Catcher:** Sends alerts through the *Bloomberg Alert Catcher* (BLRT) function and enables delivery options.

Note: You can click **Show Alert Catcher Delivery Options** to specify BLRT preferences.

The relevant fields that activate depend on your selections.

4. Depending on which delivery option(s) you selected, do the following:

- If you select *Deliver to Activity Panel*, enter a message in the amber field (e.g., *Limit away from market by 20 bps*).

- If you select *Create Column in EMSX*, update the **Text if true** and **else** fields, then select a column number. For example, you can set the tag ">40%ADV" to appear in the *RBLDOrder1* column of your EMSX blotter when the condition is true and set the tag "<40%ADV" to appear when the condition is false.

- If you select *Forward a Message to*, add recipients by typing their names or UUIDs in the amber field.

5. If you are creating a new rule, click the **Create Rule** button.

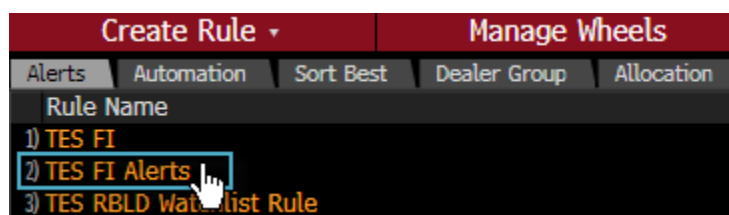

[Hint] Rules are enabled by default. If you do not want to enable the new rule, deselect *Enable*.

My Rules Tab

On the *My Rules* tab, you can manage and take action on existing alert rules.

Steps:

1. Click a rule name (e.g., *TES FI Alerts*).

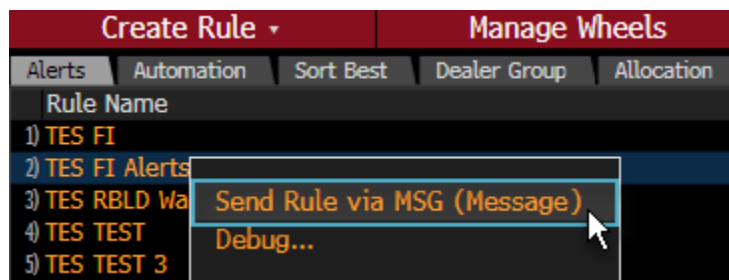

The rule opens in the *Create Rule* screen.

2. Edit the name, conditions, and/or actions, then click the **Update** button.

The rule updates.

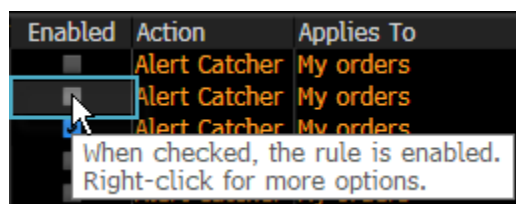

3. If you want to send a rule to another Bloomberg user so she can quickly copy and apply it, right-click the rule, then click *Send Rule via MSG (Message)*.

The *Message: Compose* screen of the *Message (MSG)* function appears with the rule as an attachment.

4. If you want to enable/disable a rule, select/deselect the check box in the *Enabled* column, then confirm your selection.

Note: New rules are enabled by default.

Creating Routing Rules

You can create conditional rules to route orders to your preferred brokers and strategies based on your customized Quick Buttons. You can route orders to a single broker or to a rotation of brokers via a broker wheel. To optimize control over your blotter, you can define which orders can be routed with full automation, which require one-click confirmation to route, and which can be manually sent to a wheel type for evaluation.

Note: To mitigate risk, RBLD can be configured to limit the creation of autorouting rules to team administrators (e.g., the head of desk). All team members are able to enable/disable their autorouting rules.

Autorouting Rules

If you are enabled, you can use RBLD to create rules that determine which orders in your *Execution Management System* (EMSX) blotter can be routed to brokers automatically. For example, you can define one rule that allows certain low-risk, high-liquidity orders to be routed automatically and another rule that requires one-click confirmation in EMSX.

Note: To automatically round robin orders to more than one broker, you must create a broker wheel. For more information on creating and managing broker wheels: [Broker Wheels Manager Help Page](#).

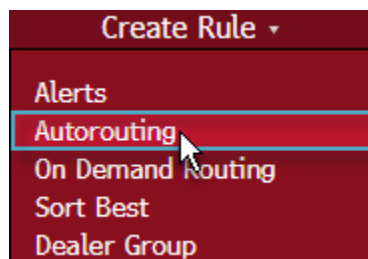

Creating Autorouting Rules for Listed Equities

You can automatically route listed equity orders in your EMSX blotter to brokers.

Note: When an order comes into your blotter, your autorouting rules are evaluated in order, based on the priority you set on the *Autorouting* tab. When the system finds a rule that matches the order, the rule is triggered and additional evaluation stops.

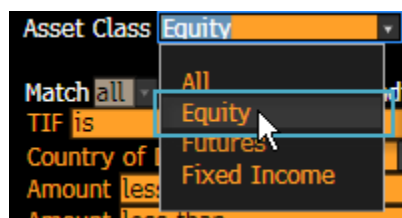

Steps:

1. On the main *Rule Builder* screen, from the toolbar, select **Create Rule > Autorouting**.

The *Create Rule* screen appears.

2. From the *Select an Asset Class* drop-down menu, select the asset class to which the rule applies (e.g., *Equity*).

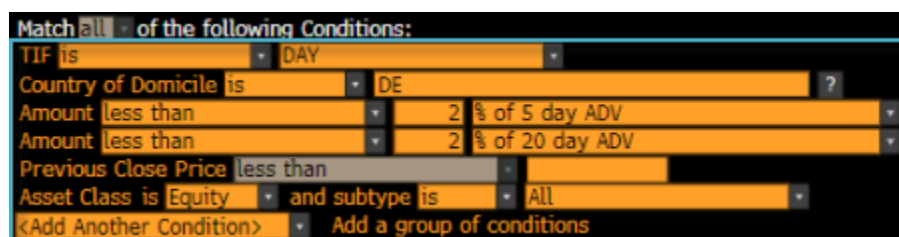

Suggested rule conditions appear.

3. In the *Applies To* drop-down menu, ensure that the selection is set to *Orders for Autorouting*.

4. Modify the suggested conditions to specify the universe of orders to which your autorouting rule applies (e.g., add a country of domicile). For more: [Setting Rule Conditions](#).

[Hint] When entering values for the *Country of Domicile*, *Currency*, or *Exchange* conditions, you can select options from a menu by clicking the ? button.

5. From the *Select Autorouting Logic* section, determine the autorouting logic for the rule.

- In the *Action* section, select one of the following:
 - Route automatically:** Routes an order to the broker(s) for completion as soon as the order comes into the EMSX blotter.
 - Route upon confirmation:** Holds autorouting orders in the EMSX blotter until you review and provide confirmation.
 - Do not route:** Allows you to use RBLD for alerting only. This option can be used to test an autorouting rule.
 - If you want the rule to route orders to one broker, select the *Single Broker* option, then, from the drop-down menu, select an EMSX Quick Button to apply the broker and strategy for the rule. For more: [EMSX Help Page > Creating Quick Buttons](#).
 - If you want the rule to round robin orders to several different brokers, select the *Multiple Brokers* option, then, from the *Use Wheel* drop-down, select a broker wheel. For more on creating broker wheels: [Broker Wheels Manager Help Page](#).
6. If you want to assign additional actions to the rule, follow the steps in [Setting Rule Actions](#).
 7. In the *Rule Name* field, enter a name, then click the **Create Rule** button.

[Hint] Rules are enabled by default. If you do not want to enable the new rule, deselect *Enable*.

The rule saves.

Creating Autorouting Rules for OTC Equities

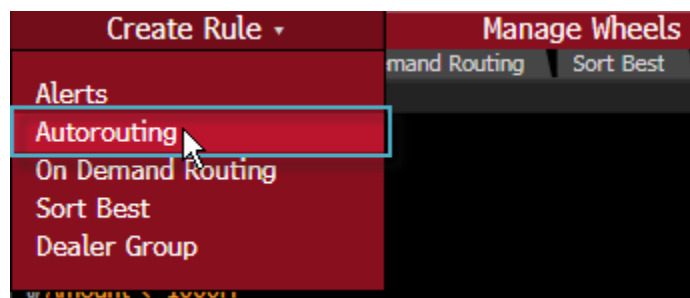

You can automate the request for quote (RFQ) process to streamline over-the-counter (OTC) orders for listed instruments (e.g., exchange-traded funds (ETFs)). After staging an eligible order to EMSX, your autorouting rule can select dealers, send the RFQ, and evaluate received quotes to determine when to execute.

For more on Bloomberg's RFQ service, which provides a manual alternative to the autorouting workflow: [RFQE Help Page](#).

Note: When an order comes into your EMSX blotter, your autorouting rules are evaluated in order, based on the priority you set on the *Autorouting* tab. When the system finds a rule that matches the order, the rule is triggered and additional evaluation stops.

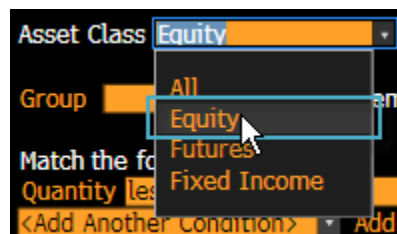

Steps:

1. On the main *Rule Builder* screen, from the toolbar, select **Create Rule > Autorouting**.

The *Create Rule* screen appears.

2. From the *Select an Asset Class* drop-down menu, select **Equity**.

3. In the *Applies To* drop-down menu, confirm that the selection is set to *Orders for Autorouting*.

4. From the *Group* drop-down menu, select **RFQE (OTC)**.

For more on setting autorouting rules for listed equities: [Creating Autorouting Rules for Listed Equities](#).

Settings that do not apply to OTC autorouting deactivate.

5. In the *Match the Following Conditions* section, specify the universe of orders to which your autorouting rule applies (e.g., add the fund's asset class focus). For more: [Setting Rule Conditions](#).

[Hint] When entering values for the *Country of Domicile*, *Currency*, or *Exchange* conditions, you can select options from a menu by clicking the ? button.

6. From the *Select Autorouting Logic* section, determine the autorouting logic for the rule.
 - a. In the *Action* section, select one of the following:
 - a. **Route automatically:** Routes an order to the dealer(s) for completion as soon as the order comes into the EMSX blotter.
 - b. **Route upon confirmation:** Holds autorouting orders in the EMSX blotter until you review and provide confirmation.
 - c. **Do not route:** Allows you to use RBLD for alerting only. This option can be used to test an autorouting rule.
 - b. From the *Dealer Selection* drop-down menu, choose an existing rule or select **Create New Rule**. For more, [Defining Dealer Selection](#).
 - c. From the **Execution Instructions** drop-down menu, select **Create New Instructions**. For more: [Defining Execution Instructions](#).
7. If you want to assign additional actions to the rule, follow the steps in [Setting Rule Actions](#).
8. In the *Rule Name* field, enter a name, then click the **Create Rule** button.

[Hint] Rules are enabled by default. If you do not want to enable the new rule, deselect *Enable*.

The rule saves.

Editing an Autorouting Rule

On the *Automation* tab, you can edit your autorouting rules to ensure they are best configured to maximize your automated order flow.

Steps:

1. Click the row of the rule you want to edit (e.g., *US Less than 1% ADV-master rule*).

Create Rule	Manage Wheels	Settings	Debug	
Alerts	Automation	Custom Auto	Sort Best	Dealer Group
Auto Hedge	Allocation	RBLD Statistics		
Usage Stats: Date Range Today 12/02/24 - 12/02/24 Total orders: 0 Total notional (USD): 0.00				
Rules are evaluated based on priority. Drag and rearrange rules to change it.				
Priority	Rule Name	Type	Enabled	Asset Class
• Autorouting				
1	NY Close Master Rule-master rule	T	☐	Fixed Income
2	AAPL Confirm		☐	Fixed Income
3	TES Confirm ET		☐	Fixed Income
4	US Less than 1% ADV-master rule		☐	Equity
5	EU Less than 1% ADV-master rule		☐	Equity
6	APAC Less than 1% ADV-master rule		☐	Equity

2. Update the rule configuration.

- To update your autorouting conditions, enter values in the relevant fields.

Rule Builder: Update Rule

Autorouting Tab

On the *Autorouting* tab, you can manage and update existing autorouting rules.

To edit a rule:

- 1. Click a rule name (e.g., *TES FI Alerts*).

The rule opens in the *Create Rule* screen.

- 2. Edit the name, conditions, and/or actions, then click the **Update** button.

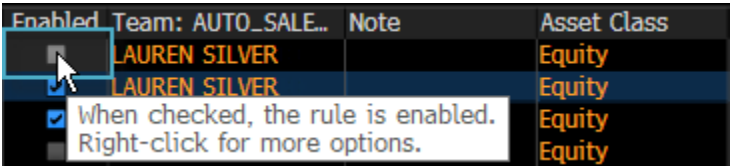

The rule updates.

- 3. If you want to send a rule to another Bloomberg user so she can quickly copy and apply it, right-click the rule, then click *Send Rule via MSG (Message)*.

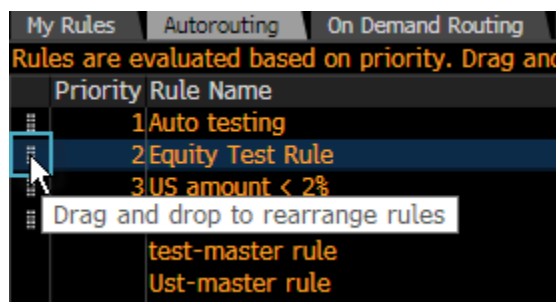

The *Message: Compose* screen of the *Message (MSG)* function appears with the rule as an attachment.

- 4. If you want to enable/disable a rule, select/deselect the check box in the *Enabled* column, then confirm your selection.

Note: New rules are enabled by default.

- 5. If you want to adjust the order in which the rules are evaluated for incoming orders, use the drag-and-drop icon to rearrange the rules.

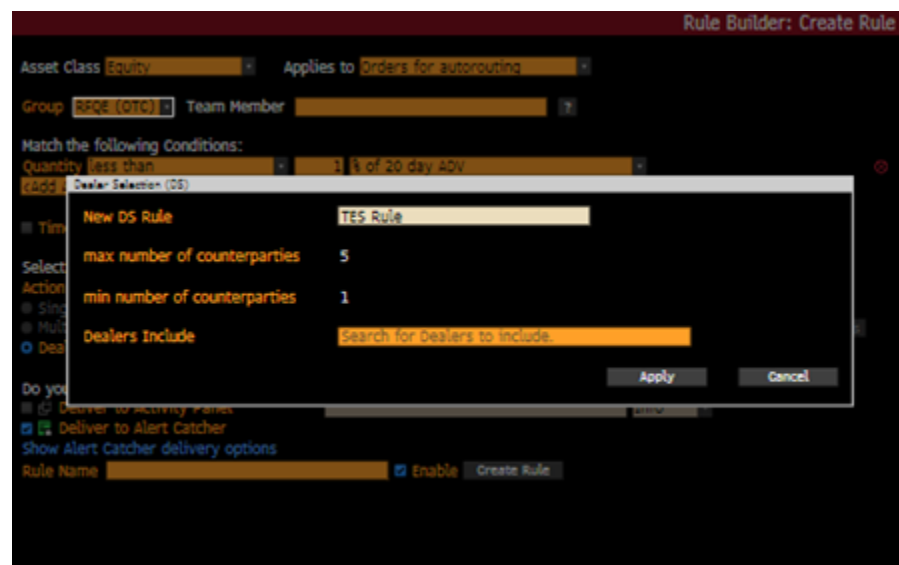

Note: Rule priority can be modified only when the list is sorted by priority.

Defining Dealer Selection

You can determine which dealers receive your request for quote (RFQ). RBLD's flexible *Dealer Selection* window allows you to define dealer-specific criteria while eliminating the risk of human bias in order distribution.

Note: RBLD always respects hard-coded include/exclude instructions for dealers in your OMS to apply the most restrictive list. RBLD also respects any dealer eligibility configurations you set in the *FIT Participant Onboarding* (ENFB) or *Legal Entity Identifier* (LEIA) functions.

Defining Execution Instructions

You can define the conditions that RBLD applies to dealer responses in real time to determine whether a trade results.

Steps:

1. In the *Name* field, enter a name for the instructions (e.g., *BGM Instructions*).

Execution Instructions

Name **BGM Instructions**

Quote Collection

Venue **BGM**

Minimum Wait Time for Dealers to respond **30** seconds

2. Specify conditions based on the liquidity and state of the market sectors in which you are trading:

Execution Instructions

A second condition appears.

- Click the **Create** button.

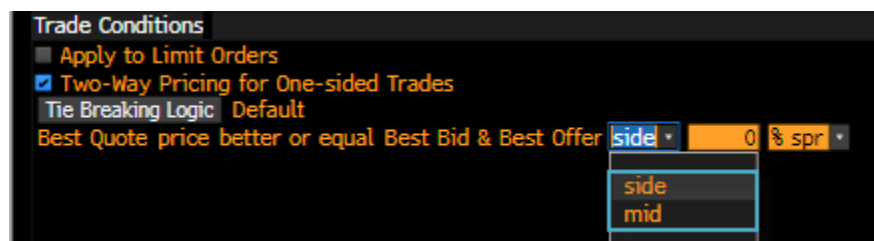

Your settings are saved.

Establishing a Reference Point

Incoming dealer quotes are evaluated against the *Best Quote* parameters to determine whether the order should be executed at the quoted price. You can choose the point of reference against which to compare quotes.

Steps:

- Choose the point of reference against which to compare quotes:

- **Side:** If you have a buy order, the best quote refers to the offer level. If you have a sell order, the best quote refers to the bid level.
- **Mid:** The best quote refers to the pricing source mid-level.

2. Click the **Create** button.

Your settings are saved.

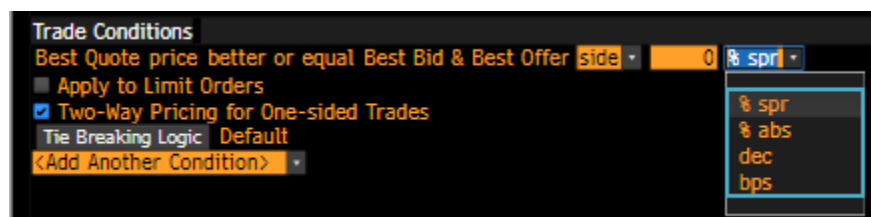

Establishing a Tolerance Type

When you set your Best Quote check, you can choose the tolerance type that you want to use.

For a detailed description of each type: [Tolerance Type Examples](#).

Steps:

1. In the Trade Conditions tolerance type field, choose the tolerance condition that you want to apply to your Best Quote check.

- **%spr (Spread):** Specifies your tolerance value as a percentage of the pricing spread quotes.
- **% abs (Absolute):** Applies your tolerance value as a percentage of the actual pricing source level.
- **Dec:** Specifies your tolerance value in terms of decimals.
- **Bps:** Applies your tolerance values as basis points of the actual pricing source level.

2. Click the **Create** button.

Your settings are saved.

Tolerance Type Examples

The following topic provides examples of the different tolerance types that you can apply to your Best Quote check.

For each example in the table below, assume the following:

- The floor level is established by the *Too Good to be True Check* and is \$97.12. The ceiling level is derived from the Best Quote condition.
- The Bid/Offer is \$99.10/\$99.20.
- The Too Good to be True is 2% Bid/Offer.
- This is a BUY order.

Select	To Specify	Examples
% spread % spread to mid	Your tolerance value as a percentage of the pricing source spread.	This spread can be bid-to-offer or mid-to-side. In either case, the spread is calculated as 100% as you can specify how much of that spread you want to capture. Tolerance Type = % spread 100%  Tolerance Type = % spread-to-mid 100%  Both of the following examples provide a best quote range of \$97.12 – \$99.18. Example 1: Best Quote: Price better equal Bid/Offer Side 20% % Spread The Bid/Offer spread is \$0.10. 20% of that spread is \$0.02. $\\$99.20 - \\$0.02 = \\$99.18$. Therefore, the acceptable best quote range is \$97.12 – \$99.18. Example 2: Best Quote: Price better equal Bid/Offer mid -60% % Spread to Mid The Mid/Bid spread is \$0.05, -60% of that spread is \$0.03. $\\$99.15 - (-\\$0.03) = \\$99.18$. Therefore, the acceptable best quote range is \$97.12 – \$99.18.

Select	To Specify	Examples
% absolute	Your tolerance values as percentages of the actual pricing source level.	Best Quote: Price better equal Bid/Offer mid 0.5% % absolute 0.5% of the mid level (\$99.15) is \$0.496. $\\$99.15 - \\$0.496 = \\$98.66$. Therefore, the acceptable best quote range is \$97.12 – \$98.66.
Dec	Your tolerance values in terms of decimals.	Best Quote: Price better equal Bid/Offer mid 15 Dec \$0.15 less than \$99.15 is \$99.00. Therefore, the acceptable best quote range is \$97.12 – \$99.00.
bps	Your tolerance values as basis points of the actual pricing source level.	Best Quote: Price better equal Bid/Offer mid -10 bps -10 bps of the mid level (\$99.15) is -\$0.09915. $\\$99.15 - (-\\$0.09915) = \\$99.24915$. Therefore, the acceptable best quote range is \$97.12 – \$99.24915.

Specifying Multi-Best Quote Trade Conditions

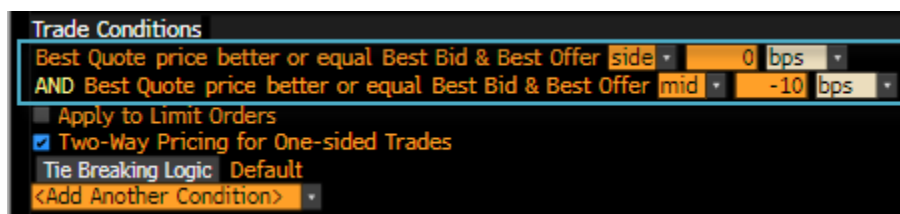

You can specify one or more *Best Quote* conditions so you have greater control over trade execution.

Each *Best Quote* condition creates a ceiling value. RBLD then selects the most conservative ceiling value as the ceiling level. For more: [Setting the Best Quote Check](#).

The following example describes how the ceiling value is selected:

- The Bid/Offer is \$99.10/\$99.20.
- The *Too Good To be True* value is 2% Bid/Offer.
- This is a buy order.

The floor level is established by the *Too Good to Be True Check* at \$97.12. The ceiling level is derived as follows:

- The first *Best Quote* check creates a ceiling value of $\$99.20 - (0 \times \$99.12) = \$99.20$.
- The second *Best Quote* check creates a ceiling value of $\$99.15 - (-10 \text{ bps} \times \$99.15) = \$99.24915$.

\$99.20 is the most conservative ceiling value, so the ceiling level is set at \$99.20.

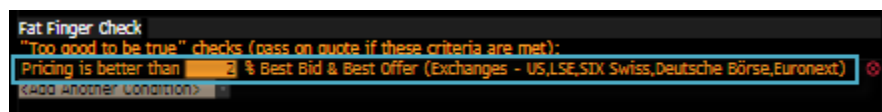

"Too Good To Be True" Check

You can use a *Too good to be true* check to evaluate quotes and pass on erroneous outliers. The following is an example of a fat finger check:

Assume the following:

- Bid/Offer: \$99.10/\$99.20
- Too good to be true: 2% Bid/Offer
- BUY order

The *Too good to be true* level is 2% away from the bid side of the market at \$97.12 ($\$99.10 - (\$99.10 \times 0.02) = \97.12). If the dealer prices lower than \$97.12, the system assumes it to be at an erroneous level and passes the entire RFQ.

Note: For a buy order, the bid side is used to establish the *Too good to be true* level; for a sell order, the offer side is used to establish the level.

Execution Instructions Workflow

When you apply execution instructions to your rule, RBLD takes the following steps to evaluate, and if appropriate, route orders to the selected dealers.

The execution instructions are applied once the RFQ is sent to the dealers chosen based on your *Dealer Selection* criteria. Dealers are given a minimum wait time (configured in the *Quote Collection* section) to respond. At this point, the quotes are collected, but are not yet evaluated.

Execution Instructions

Name

Quote Collection

Venue

Minimum Wait Time for Dealers to respond seconds

Minimum Number of Valid Quotes

Fat Finger Check

"Too good to be true" checks (pass on quote if these criteria are met):

Variance of between best and top

Trade Conditions

Trade if best quote is within variance of between best and top

☐ Apply to Limit Orders

☒ Two-Way Pricing for One-sided Trades

Tie Breaking Logic:

Exit Conditions

Maximum Wait Time (quit if no response for) seconds

- Once the minimum wait time expires, the quotes are evaluated.
- The *Fat Finger Check* (Too good to be true check) is evaluated, and if the variance between the best and the nth dealer quote is higher than the provided value, the RFQ is canceled.
- If your fat finger check conditions are met, the *Minimum Number of Valid Quotes* condition is checked, then the *Trade Conditions* are evaluated.
- If the previous conditions are successful, a hit or lift is sent to the dealer that best fits your criteria.
- If the *Minimum Number of Valid Quotes* or *Trade Conditions* criteria is not met, RBLD waits for the next quote, then reevaluates the *Fat Finger Check*, *Minimum Number of Valid Quotes*, and *Trade Conditions*.
- If the *Trade Conditions* or *Minimum Number of Valid Quotes* is not fulfilled when the *Maximum Wait Time* expires, RBLD cancels the RFQ.

Note: The *Maximum Wait Time* is the time (in seconds) that RBLD allows for the *Quote Collection* and *Execution Instructions* conditions to be met. If the time elapses before all conditions are met, the RFQ is passed..

A reevaluation of the three conditions with every quote updates once the *Minimum Wait Time* expires (regardless of whether it is a re-quote or a quote from a new dealer).

Note: For a buy order, the bid side is used to establish the *Too Good to be True* level; for a sell order, the offer side is used.

Creating Eco Rules

You can suspend the autorouting of orders for a period before and after economic releases to minimize the risk of routing orders when the potential exists for market volatility.

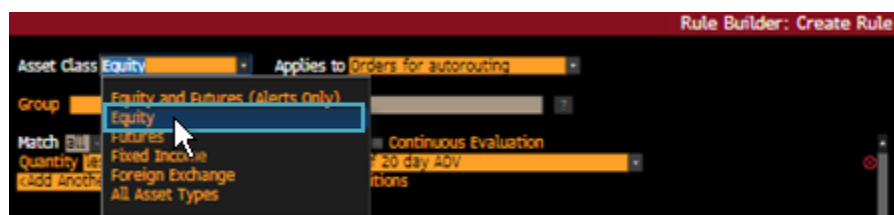

Steps:

1. From the toolbar, select **Create Rule > Autorouting**.

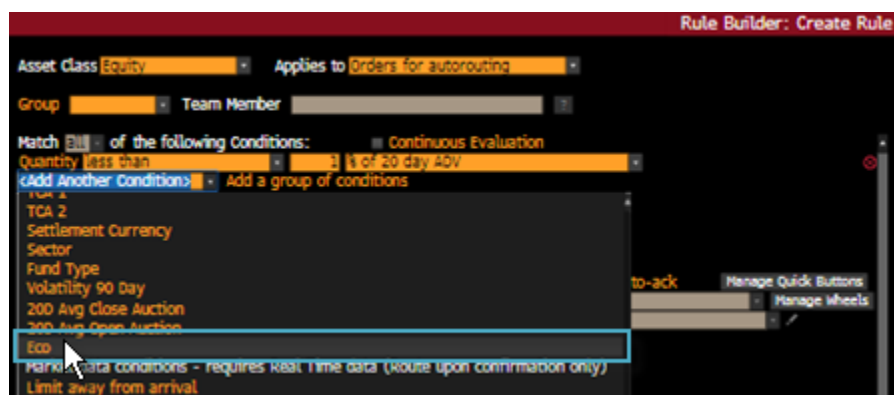

The Rule Builder: Create Rule screen appears.

2. In the Asset Class field, select the relevant asset class (e.g., **Equity**).

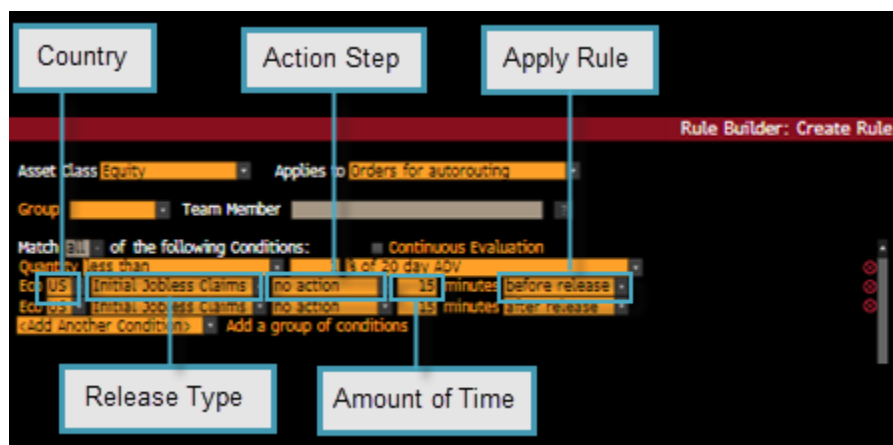

Note: You can apply the Eco condition to equity, fixed income, and foreign exchange securities.

3. From the <Add Another Condition> drop down, select **Eco**.

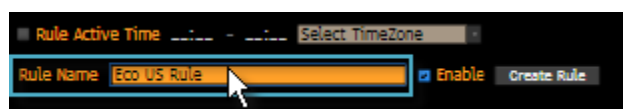

Additional fields appear.

4. Make your selections in the Eco fields to customize the condition.

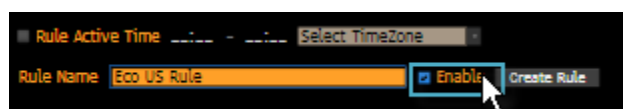

- **Country:** Select the country of origin for the economic release.
- **Release Type:** Select the type of economic release.
- **Action Step:** Choose whether to allow your automated rules to take effect for the time you specify before and/or after an economic release.
- **Amount of Time:** Select the number of minutes that you want to suspend your rules.
- **Apply Rule:** Choose whether to apply this condition before or after the release.

5. In the *Rule Name* field, enter a name for your rule.

6. If you want to enable the rule upon creation, select the *Enable* checkbox.

7. Click the **Create Rule** button.

The rule is saved and applied when economic reports are released.

On-Demand Routing Rules

On-demand routing rules allow you to associate a "wheel type" tag (e.g., VWAP) with a rule's order conditions and routing preferences. When you apply a given wheel type to more than one on-demand routing rule, you create a group of rules related to the same approach or strategy.

After using RBLD to specify the conditions required for on-demand routing, you can use the "Send to Wheel" action in EMSX to send an order to the wheel type, rather than to an individual broker wheel. When you select "Send to Wheel," the order is

evaluated against all on-demand routing rules tagged with the wheel type and is sent to the wheel associated with the relevant rule.

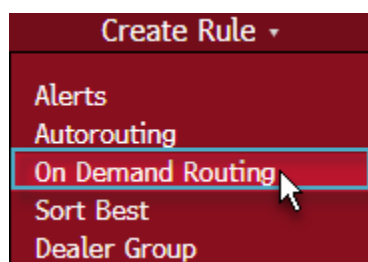

Creating On-Demand Routing Rules

You can create an on-demand routing rule to specify a universe of orders for which you want to manually apply a broker wheel.

Once you have created on-demand routing rules, you can route orders to the relevant wheel type directly from EMSX. For more: [EMSX Help Page > Routing Orders Based on Wheel Type](#).

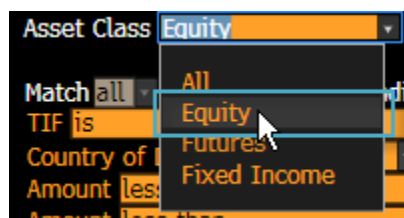

Steps:

1. On the main *Rule Builder* screen, from the toolbar, select **Create Routing Rule > On Demand Routing**.

The *Create Rule* screen appears.

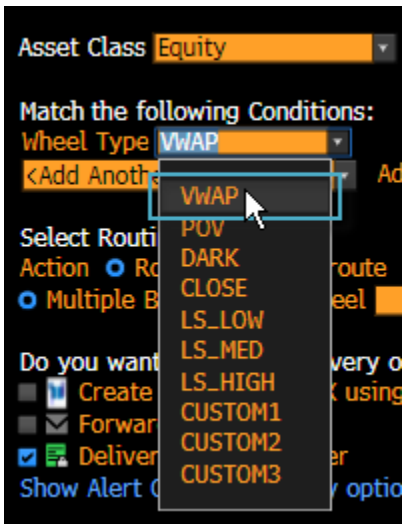

2. From the *Asset Class* drop-down menu, select the asset class to which the rule applies (e.g., *Equity*).

3. In the *Applies To* drop-down menu, ensure that the selection is set to *Orders for On Demand Routing*.

4. From the *Wheel Type* drop-down menu, select the tag you want to apply to the rule (e.g., *VWAP*).

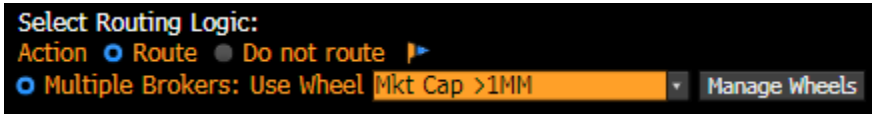

Note: The *Wheel Type* tags allow you to associate the rule with common strategy types. When you associate a wheel to a rule, the wheel inherits this tag. For more on using the wheel type to send an order to the wheel in EMSX: [EMSX Help Page > Routing Orders Based on Wheel Type](#).

5. From the *Add Another Condition* drop-down menu, add one or more conditions to the rule. For more: [Setting Rule Conditions](#).

6. From the *Select Routing Logic* section, select the routing logic for the rule.

- a. In the *Action* section, select one of the following:
- a. **Route:** Routes an order to the wheel for completion when you select the *Send to Wheel* option in EMSX.
 - b. **Do not route:** Allows you to use RBLD for alerting only; displays orders in the EMSX blotter but will not route them.
- b. If you want to route orders to several different brokers, select the *Route* option, then, from the *Multiple Brokers: Use Wheel* drop-down menu, select a broker wheel. For more on creating broker wheels: [Broker Wheels Manager Help Page](#).
7. If you want to assign additional actions for the rule, follow the steps in [Setting Rule Actions](#).

8. In the *Rule Name* field, enter a name, then click the **Create Rule** button.

[Hint] Rules are enabled by default. If you do not want to immediately enable the rule, deselect the *Enable* check box.

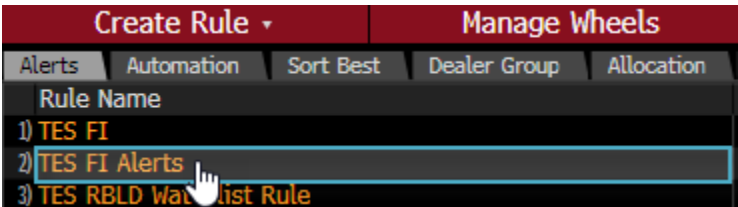

The rule saves and appears on the *On Demand Routing* tab. Rules are grouped by *Wheel Type*, so all rules tagged with VWAP appear together. When you select VWAP in EMSX, any rules under the VWAP header are evaluated to determine how to route the order.

On Demand Routing Tab

On the *On Demand Routing* tab, you can manage and take action on existing on-demand routing rules. You can also see which rules and wheels are associated with a specific wheel type.

To edit a rule:

1. Click a rule name (e.g, *TES FI Alerts*).

The rule opens in the *Create Rule* screen.

2. Edit the name, conditions, and/or actions, then click the **Update** button.

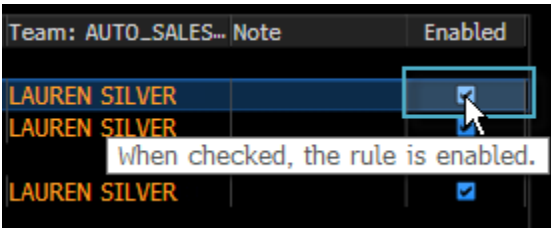

The rule updates.

3. If you want to send a rule to another Bloomberg user so she can quickly copy and apply it, right-click the rule, then click *MSG - Message*.

The *Message: Compose* screen of the *Message (MSG)* function appears with the rule as an attachment.

4. If you want to enable/disable a rule, select/deselect the check box in the *Enabled* column, then confirm your selection.

Note: New rules are enabled by default.

5. If you want to adjust the order in which the rules are evaluated for incoming orders, use the drag-and-drop icon to rearrange the rules.

Note: You can adjust the priority of rules within each *Wheel Type* header. When you select VWAP in EMSX, the rules under the VWAP header will be evaluated in this priority to determine how to route the order.

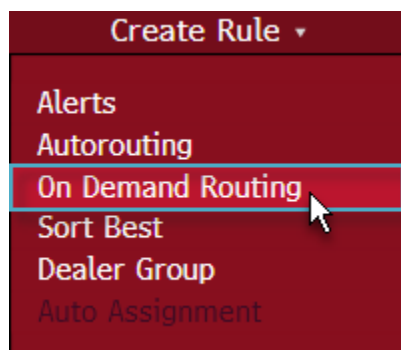

Creating a Routing Group

You can create a routing group (previously referred to as *wheel type*) so you can configure your on-demand routing rules to send orders or RFQs to the brokers that best fit your criteria.

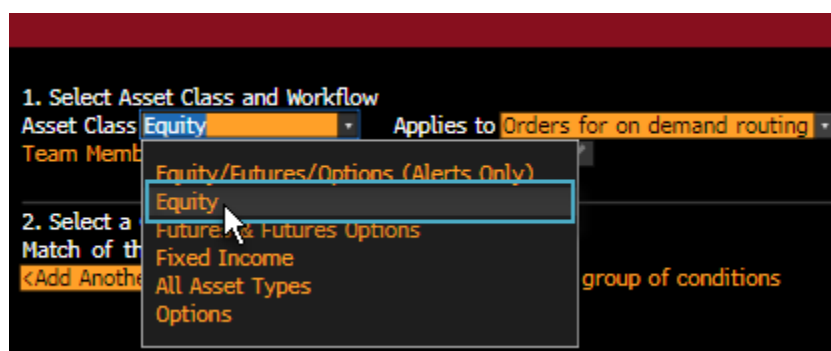

Steps:

- 1. From the *Create Rule* drop-down menu, select **On Demand Routing**.

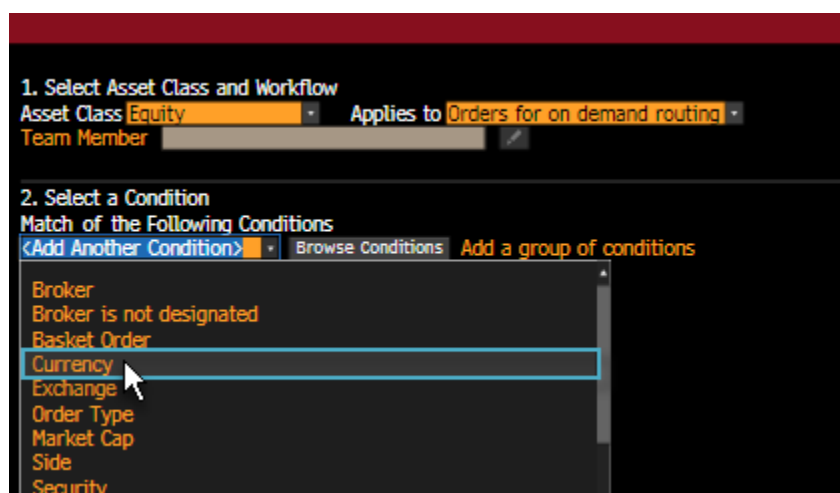

The Rule Builder: Create Rule screen appears.

- From the Asset Class drop-down menu, select **Equity**.

The screen updates with options for equity orders.

- In the Select a Condition section, add the condition that you want to include in the rule (e.g., Currency).

The screen updates with your selections.

- From the Action drop-down menu, select the action that triggers when the rule criteria are met. (e.g., Route).

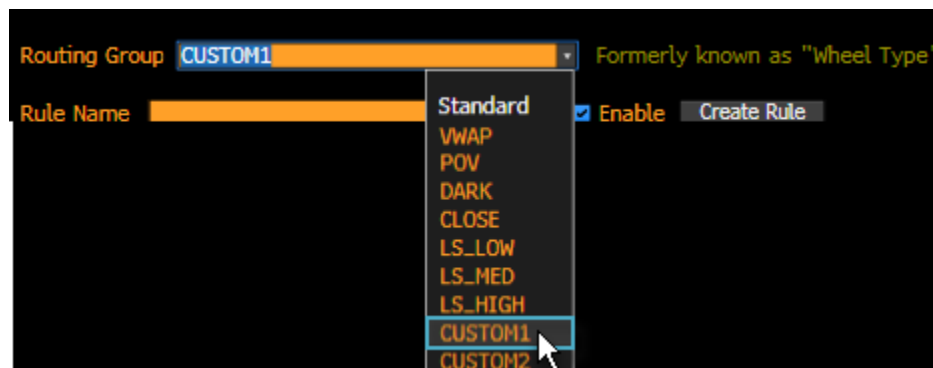

The screen updates with your selections.

5. If you selected *Route* in Step 4, in the *Select Broker* section choose the brokers to receive the routed orders.

The screen updates with your selections.

6. From the *Routing Group* drop-down menu, select the group to receive the auto-routed order (e.g., *Custom1*).

7. In the *Rule Name* field, enter the name for your rule, then select the *Enable* checkbox.

8. Click the **Create Rule** button.

Your rule is created and appears on the main RBLD screen.

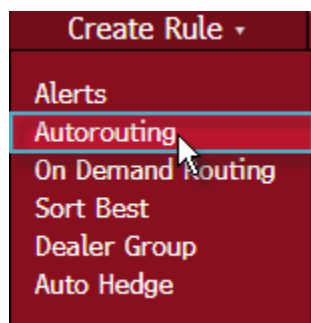

Setting TCA Rule Conditions

You can use pre-trade scenarios from the *Transaction Cost Analysis* (TCA) function to create rules in RBLD using a combination of single conditions and condition groups. These rules can then be used to build workflows for your orders in the *Execution Management System* (EMSX) function based on the participation rate, trade cost, time risk, and duration.

Note: The rule conditions you set apply to orders routed through the *Execution Management System* (EMSX) function.

Steps:

1. From the toolbar, select **Create Rule>Autorouting**.

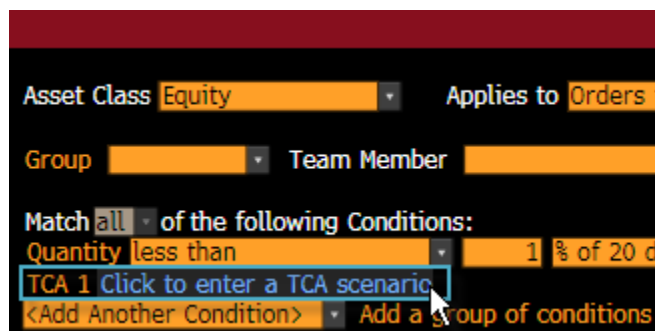

The *Rule Builder: Create Rule* screen appears.

2. From the <Add Another Condition> drop-down menu, select a TCA option (e.g., TCA 1).

The message, *TCA # Click to Enter a TCA Scenario* appears above the <Add Another Condition> field.

3. Click the **Click to enter a TCA scenario** message.

The TCA Scenario window appears.

4. Select the scenario options that you want to add, e.g., *End at Close*), then click the **Apply** button.

Your scenario options are added to your rule conditions.

Creating TCA Scenarios in RBLD

Once you add a TCA condition to a rule in RBLD, you can create a scenario and add conditions based on analytics from the *Transaction Cost Analysis* (TCA) function.

For more on accessing TCA rule conditions: [Setting TCA Rule Conditions](#).

The following section maps the fields in the *TCA Scenario* window to the analytics in TCA.

Scenarios in RBLD:

Optimal:
Lowest Cost
(Trade Cost
+ Time Risk)

- **Participation is fixed at [X] percent:** Entering a percentage in this field is equivalent to putting a percentage in the *Part %* field in TCA. The parameters in the *TCA Scenario* window's *Step 2* section are compared against the selected participation rate row in TCA's *Execution Strategy* section.
- **Duration is fixed at:** Entering a time in this field is the equivalent of entering a date in TCA's *Time* field. The parameters in the *TCA Scenario* window's *Step 2* section are compared against the selected duration row in TCA's *Execution Strategy* section.
- **End at Close:** Displays *(Close) x%* in the *Part%* column in the execution strategy table in TCA <GO>. The parameters in the *Step2* section of the *TCA Scenario* screen are compared against the *Close x%* row in TCA's *Execution Strategy* section.
- **Block:** Displays *Block* in the *Part%* column in TCA's *Execution Strategy* section.
- **Optimal: Lowest Cost (Trade Cost + Time Risk):** Returns the row with the lowest *Total Cost (Trade Cost + Time Risk)* in TCA's *Execution Strategy* section. The parameters in the *Step2* section of the *TCA Scenario* screen are compared against the lowest *Total Cost* in TCA's *Execution Strategy* section.

Adding Conditions to TCA Scenarios in RBLD

Once you add a TCA condition to a rule in RBLD, you can create a scenario and add conditions based on analytics from the *Transaction Cost Analysis (TCA)* function.

For more on accessing TCA rule conditions: [Setting TCA Rule Conditions](#).

The following section maps the fields in the *TCA Scenario* window to the analytics in TCA.

Scenarios in RBLD:

TCA Scenario

- **Total Cost:** Allows you to compare the value in the *Total Cost* column in TCA's *Execution Strategy* section based on the *Scenario* in the *Step1* section.

Setting Continuous Evaluation

You can configure your rules to continuously evaluate an order, so that when it comes within your prescribed limits, it is autorouted. This allows better opportunities for execution as opposed to only evaluating an order at the time it is received.

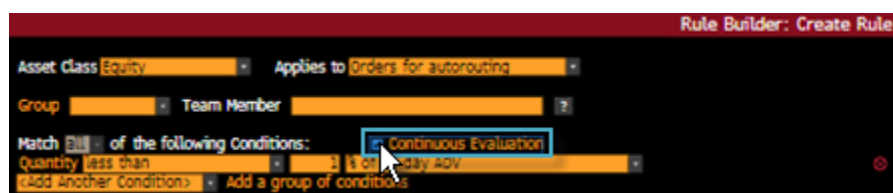

Steps:

1. From the toolbar, select **Create Rule > Autorouting**.

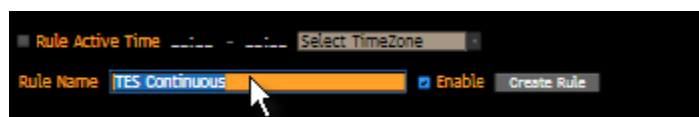

The *Rule Builder: Create Rule* screen appears.

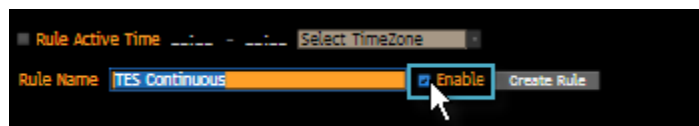

2. Select the *Continuous Evaluation* checkbox.

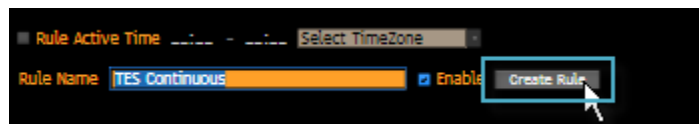

3. In the *Rule Name* field, enter the name for your new rule.

4. To activate the rule, click the *Enable* checkbox.

5. To save the rule, click the **Create Rule** button.

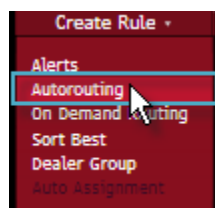

Your rule is created and appears in your list of autorouting rules.

Setting Delayed Autorouting

You can configure your rules to automatically route your orders at a specific time, or to delay routing by a specified amount of time so that your orders are sent when you can achieve best execution.

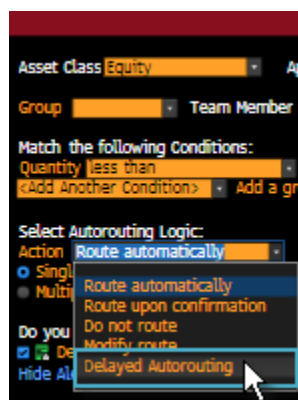

Steps:

1. From the toolbar, select **Create Rule > Autorouting**.

The *Rule Builder: Create Rule* screen appears.

2. From the *Action* drop-down menu, select **Delayed Autorouting**.

New options appear.

3. In the timing field, select *At* or *Delayed By*.

- **At:** If selected, enter the time and time zone that you want your orders to be routed.

- **Delayed By:** If selected, in the *Hours*, *Minutes*, and *Seconds* fields, enter the amount of time to delay.

- In the *Rule Name* field, enter the name for your new rule.

- To activate the rule, click the *Enable* checkbox.

- To save the rule, click the **Create Rule** button.

Your rule is created and appears in your list of autorouting rules.

Managing Rules

RBLD gives you control over your order management, allowing you flexibility in reviewing and editing rules as you see fit.

Rule History Tab

On the *Rule History* tab, you can see an audit trail of changes to your rules. You can use this tab to see the last time a rule was created, updated, disabled, or deleted, and by whom.

To review changes to your rules:

In the amber column headers, filter by date, time, rule name, description, or updater to narrow the list.

[Hint] You can click into a rule to see the details and, if necessary, make changes. You can also restore a rule that was deleted.

The list updates to show the relevant rules and changes.

Enabling Rules in Bulk

From the *Automation* and *Alerts* tabs, you can enable and disable rules in bulk to quickly manage multiple rules at once.

Steps:

1. Choose how you want to select rules:
- To select a range of rules, hold the <Shift> key and select the first and last rule you want to include.
 - To select rules one-by-one, hold the <Ctrl> key while selecting rules.

Note: You can select up to 150 rules at once.

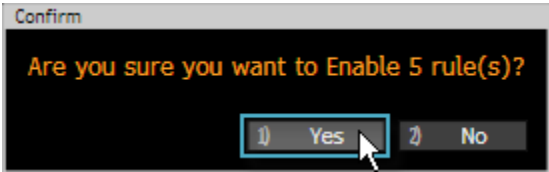

2. Right-click the rules you selected, then select **Enable [#] rule(s)** or **Disable [#] rule(s)**.

Priority	Rule Name	Type
Autorouting		Execution P
1	UST Route Automatically <15MM	
2	UST Delayed 15-25MM	T
3	UST One Click 25-50MM	
4	UST Slicer 50MM+	
5	UST Continuous Evaluation	
6	UST Aggressive <15MM	
7	UST Retry Autorouting	
RETRY_5DEALERS		
1	UST Retry	

Send Rule via MSG (Message)
Enable 5 rule(s)
Disable 5 rule(s)
Copy "UST One Click 25-50M..."

The *Confirm* window appears.

3. Click the **Yes** button.

The rules you selected are enabled or disabled.

Note: If you enabled or disabled a master rule, only the selected rule is updated. You do not need to update any team rules linked to the master rule.

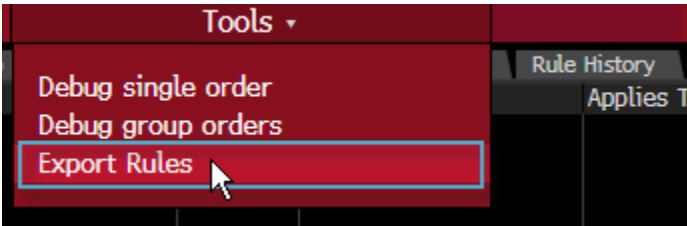

Exporting Rules

You can export rules in bulk to Microsoft® Excel, so you can review all of your team's rules at once and prepare for compliance audits.

Note: You must have permission to access rule export. For more information, contact your Bloomberg Account Representative.

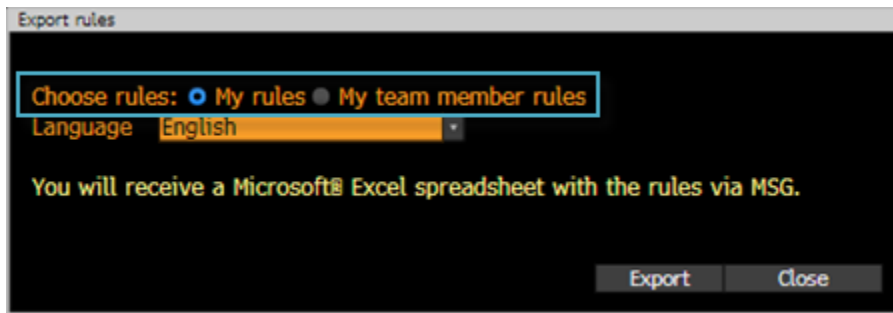

Steps:

1. From the toolbar, select **Tools > Export Rules**.

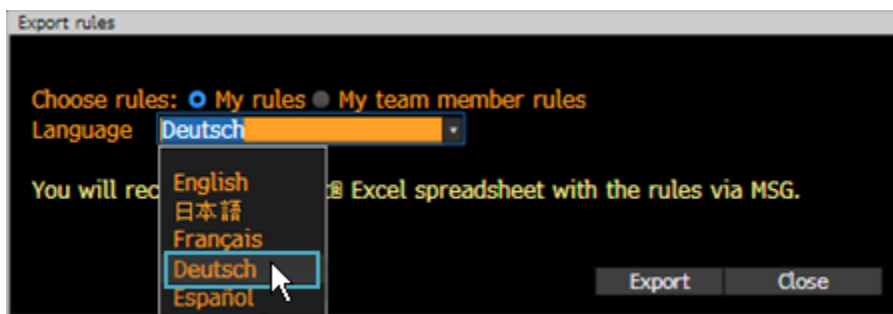

The *Export Rules* window appears.

2. From the *Choose Rules* options, select the rules you want to export:

- **My Rules:** Export your rules only.
- **My Team Member Rules:** Download all of your team's rules.

3. If you want to export the rules in a different language, from the *Language* drop-down menu, select an option (e.g., *Deutsch*).

4. Click the **Export** button.

A message is sent to your *Message* (MSG) function inbox with an attached Excel file containing the selected rules.

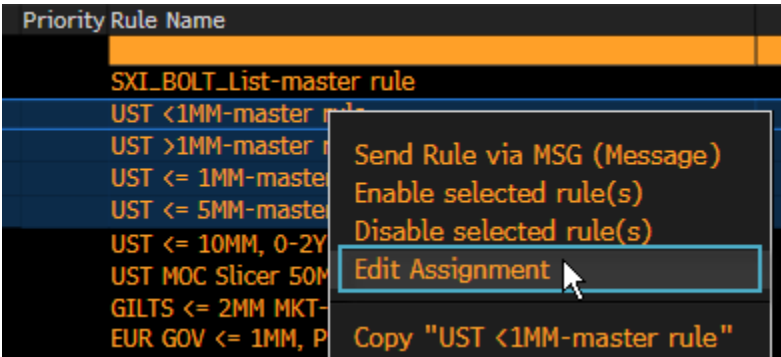

Assigning Rules in Bulk

From the *Automation* tab, you can assign and un-assign master rules to multiple users at once, so you can quickly manage your team's rule access.

If you are an *RBLD Permissions Manager* (AUTO) group admin, rule assignment allows you to share master rules with your group. When you assign a rule, the user receives it as a read-only team rule that automatically updates when you edit the master rule, providing greater automation consistency and control across the desk. For more on assigning desk permissions: [AUTO Help Page > Quick Start](#).

Steps:

1. Choose how you want to select rules:
 - To select a range of rules, hold the <Shift> key and select the first and last rule you want to include.
 - To select rules individually, hold the <Ctrl> key and click the rules you want to include.
2. Right-click the selected rules, then select **Edit Assignment**.

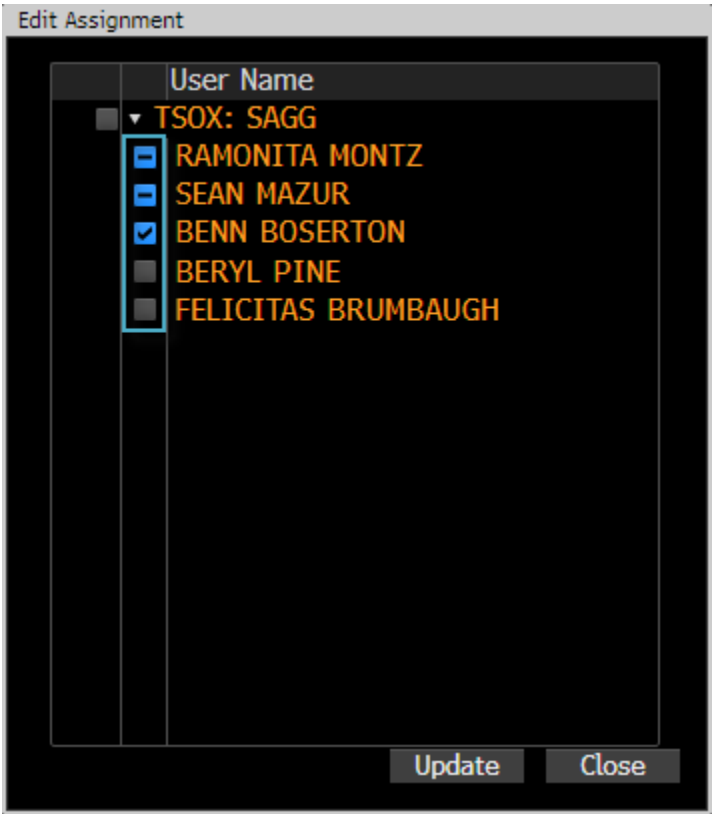

The *Edit Assignment* window appears.

Note: If the *Warning* window appears, it indicates that at least one of the rules you selected is not a master rule.

3. Select/de-select the users you want to assign/un-assign to the rule.

Note: The dash icon indicates that a user has access to some, but not all, of the rules you selected, while the checkmark icon indicates that a user has access to all of the rules.

[Hint] You can select all users within a group by selecting the group name.

4. Click the **Update** button.

Your bulk rule assignments update.

Note: If you assigned a rule to users who are not enabled for the corresponding asset class, the rule is not assigned to those users.

Debugging Rules

You can evaluate which rule conditions were applied to an order so that you are certain that your rules are configured to return your desired results.

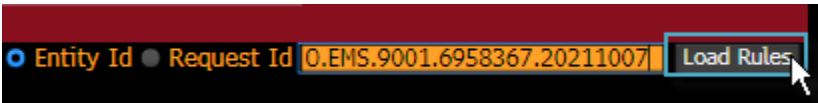

Steps:

- 1. On the toolbar, select the **Debug** button.

The *Rule Builder: Debug Conditions* window appears.

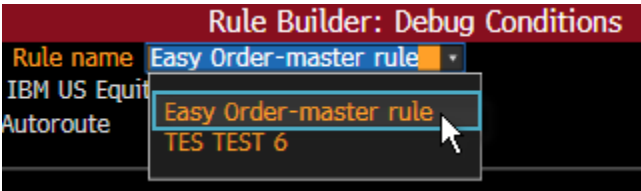

- 2. Enter the *Entity ID* or *Request ID*, then click the **Load Rules** button.

- **Entity ID:** The ID of the order obtained from the *Order ID* or *Route ID* columns in EMSX <GO>.
- **Request ID:** The session number obtained by running RYBI <GO> 99 and the number of requests ([session number] - [number of requests]).

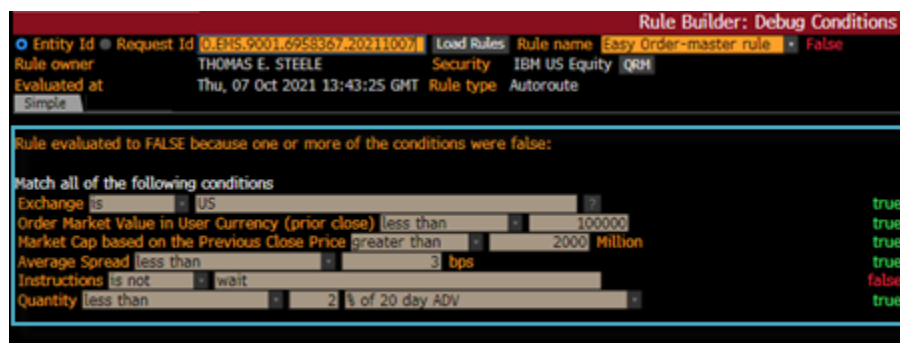

Your rules are loaded in the *Rule name* field.

- 3. Select the rule that you want to evaluate from the *Rule name* drop-down list.

Your results appear.

- 4. Review whether your rule conditions were evaluated as true or false.

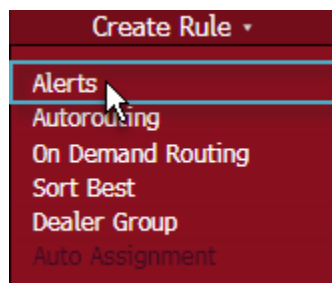

Creating Conditions With AI

You can leverage a search engine powered by AI natural language processing to identify and add rule conditions that best fit your workflow.

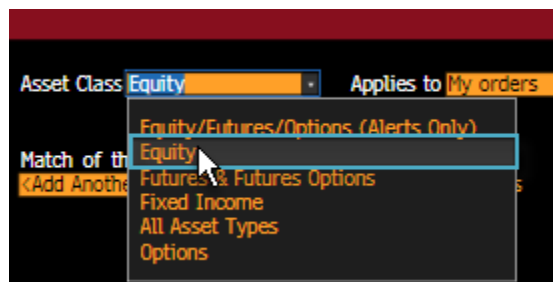

Steps:

1. From the toolbar, select **Create Rule**, then choose the type of rule (e.g., *Alerts*).

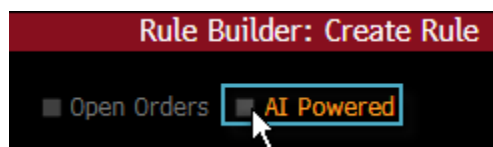

Rule creation options appear.

2. In the *Asset Class* field, select **Equity**.

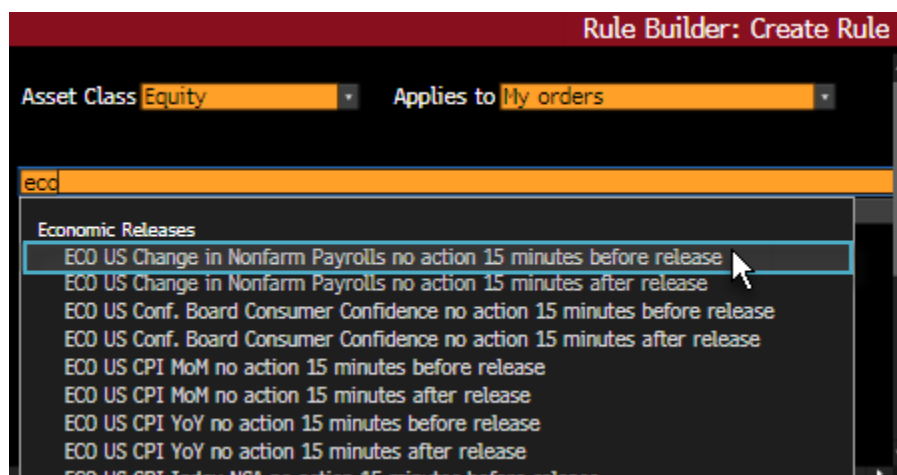

Equity-specific fields appear.

3. Click the *AI Powered* checkbox.

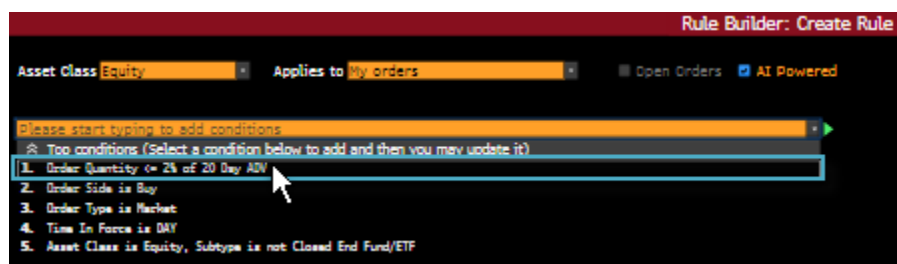

AI options appear.

- To bring up a list of options, in the write-in field, start typing keywords for your search (e.g., *Eco*), then choose from the options that appear (e.g., *ECO US Change in Nonfarm Payrolls no action 15 minutes before release*).

The condition is added to your rule.

- To select from a list of commonly used conditions, select from the options that appear beneath the write-in field (e.g., *Order quantity <= 2% of 20 day ADV*).

The condition is added to your rule.

- In the *Rule Name* field, enter a name for your rule, then click the *Enable* checkbox.

Match **All** of the following Conditions (see [examples](#)) Select a template

ECO US • Change in Nonfarm Pa • no action • 15 minutes before release •

Quantity less than • 2 % of 20 Day Average Opening Auction •

(Add Another Condition) • Add a group of conditions

Do you want to update delivery options?

Your rule is created, and appears in the list of your rules.

Running a Backtest

From the *Backtest* tab, you can use a secure environment to evaluate your rules against your equity orders in the *Execution Management System* (EMSX) function. You can also test changes to your rules to determine whether they will optimize your order flow automation.

Admins can also evaluate orders for selected team members against the admin's own rules. For more: [Backtesting Team Orders](#).

Note: You must go to the *Automation* tab to make changes to your rules. To prevent orders from being routed while you are adjusting a rule, either disable the rule or set the routing action as "Do not route". For more: [Editing an Autorouting Rule](#).

Steps:

1. From the *Asset Class* drop-down menu, select **Equity**.

Rule Builder

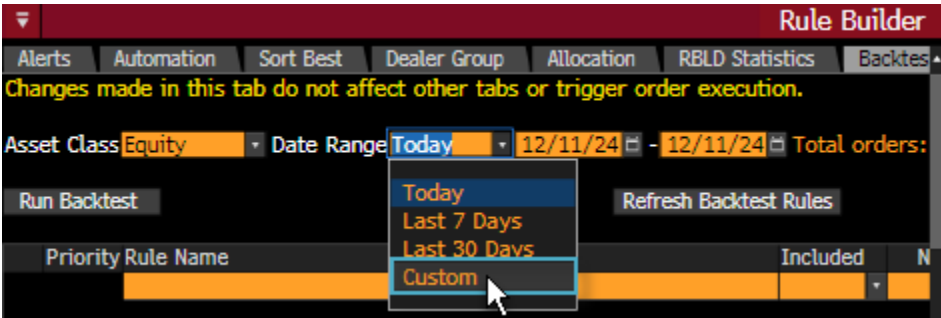

Alerts Automation Sort Best Dealer Group Allocation RBLD Statistics Backtest

Changes made in this tab do not affect other tabs or trigger order execution.

Asset Class Equity • Date Range Today • 12/11/24 • 12/11/24 • Total orders:

Run Backtest Equity Refresh Backtest Rules

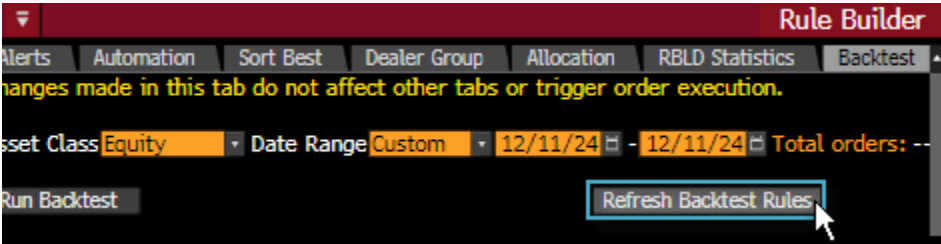

2. From the *Date Range* drop-down menu, select a time frame.

3. If you selected *Custom* from the *Date Range* drop-down menu, in the date picker fields, enter the dates you want to include in your test.

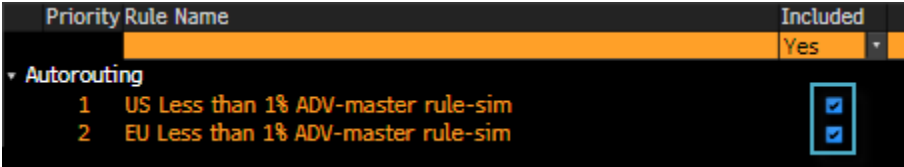

4. If you made changes to any of your rules in the *Automation* tab, click the **Refresh Backtest Rules** button.

The rules in the *Autorouting* section update based on your changes.

5. In the *Autorouting* section, select one or more rules that you want to test.

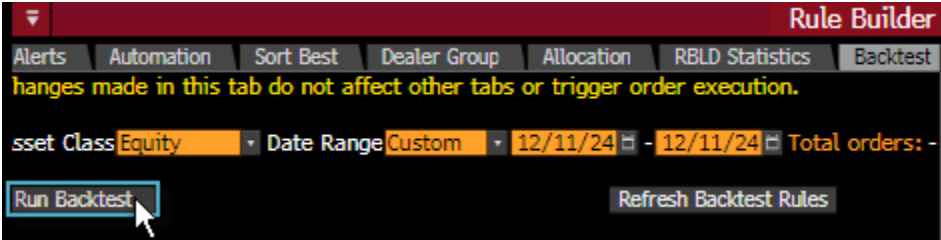

Note: You can use the *Included* drop-down menu at the top of the column to sort the rules you included from those you excluded.

6. Drag and drop the rules in order of application.

Priority	Rule Name	Included
▼ Autouting		
1	US Less than 1% ADV-master rule-master rule-sim	☒
2	EU Less than 1% ADV-master rule-master rule-sim	☒
3	APAC Less than 1% ADV-master rule-master rule-sim	☒

7. Click the **Run Backtest** button.

Your test results appear in the *Total Orders* field as well as the *Number Automated* and *% Automated* columns.

Note: If a rule that you include in the backtest contains an unsupported condition, such as TCA or real-time market data, the rule is excluded from the backtest.

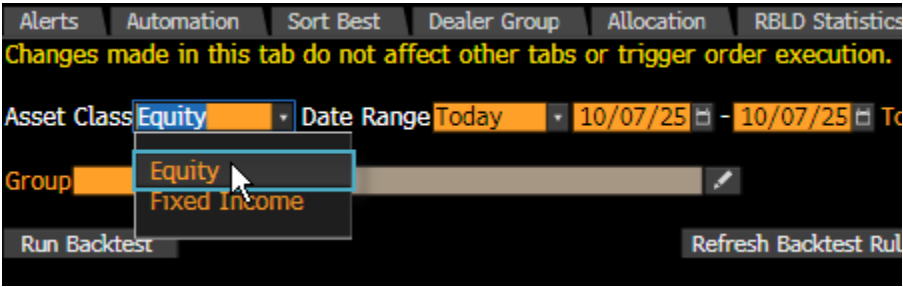

Backtesting Team Orders

In the *Backtest* tab, Admins can select users within a group while configuring a backtest to evaluate team orders against their own rules and optimize automation strategy across a desk.

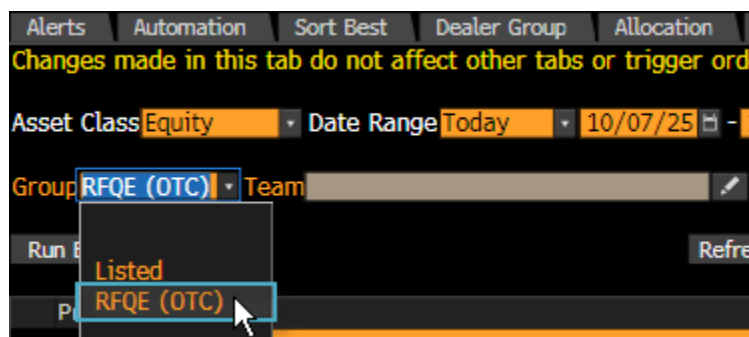

Note: Admins can configure groups in the *Auto Manager* (AUTO) function. For more: [AUTO Help Page](#).

Steps:

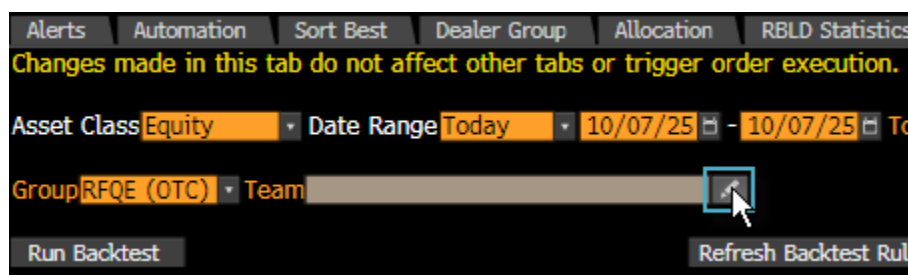

1. From the *Asset Class* drop-down menu, select **Equity**.

2. From the *Group* drop-down menu, select the group whose orders you want to evaluate (e.g., *RFQE (OTC)*).

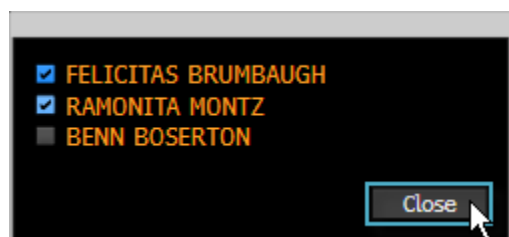

3. Beside the *Team* field, click the pencil icon.

A window appears that lists the team members within the group you selected.

4. Choose the team member(s) whose orders you want to evaluate, then click the **Close** button.

The *Team* field updates with the team members you selected.

5. Finish configuring and run the backtest by following the steps in [Running a Backtest](#).

Your test results appear in the *Total Orders* field as well as the *Number Automated* and *% Automated* columns.

Autorouting Configuration

Clients should contact their Bloomberg representative to be configured for autorouting. During this process, the firm decides on the process used to create and manage autorouting rules.

Group Control = ON

- An administrator configures the rules and modifies rules for all users of those rules.
- Traders have view-only access and the ability to turn the rule(s) on/off.

Group Control = OFF

- Each trader configures their own rule(s) and can turn them on/off.
- Each trader can see only the rule(s) that they created.

Group Control = OFF with Admin

- Each trader configures their own rule(s) and can turn them on/off.
- Each trader can see only the rule(s) that they created.
- The administrator can view the rule(s) configured by the traders and modify and/or turn the rule(s) on/off.
- The administrator cannot configure a new rule for traders.

Creating a Broker Wheel

You can use a broker wheel to take the guesswork out of broker selection, so you can manage your best execution policies and provide a defensible decision tree. You can apply a broker wheel to rules created in RBLD to automatically route certain orders to your preferred brokers and strategy groups.

Note: To create a broker wheel, you must have already created quick buttons in the Execution Management (EMSX) function that specify pre-determined order ticket values for at least one broker. For more: [EMSX Help Page > Quick Buttons](#).

Steps:

1. From the toolbar, click the **Manage Wheels** button.

The *Broker Wheels Manager* window appears.

2. Click the + tab.

Note: If you have not created broker wheels, the *Create Broker Wheel* window appears when you click the **Manage Wheels** button.

The *Create Broker Wheel* window appears.

3. Enter a wheel name (e.g., *POV_LN*).

Create Broker Wheel

Wheel Name	POV_LN
Asset Class	Equity
Route By	Orders
Ticket Aggregation	No Preferences
Route Basket to Single Quick Button	No

Create Close

4. From the *Asset Class* drop-down menu, make a selection (e.g., *Equity*).

Create Broker Wheel

Wheel Name	POV_LN
Asset Class	Equity
Route By	Orders
Ticket Aggregation	No Preferences
Route Basket to Single Quick Button	No

Create Close

5. To specify how your orders are routed, update the routing options:

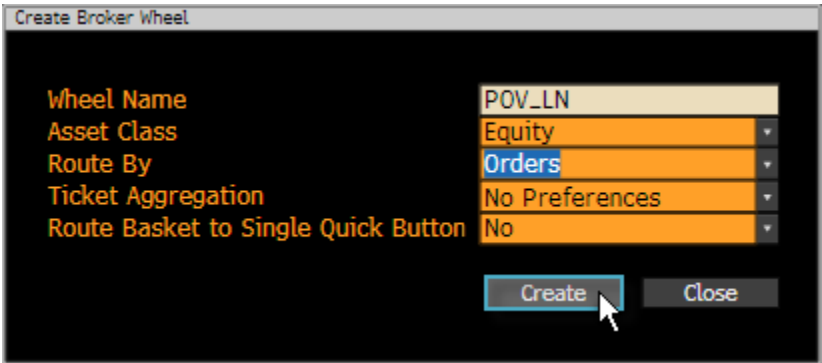

Create Broker Wheel

Wheel Name	POV_LN
Asset Class	Equity
Route By	Orders
Ticket Aggregation	No Preferences
Route Basket to Single Quick Button	No

Create Close

- **Route By:** Specify whether you want your orders to route by *Orders*, *Shares*, *Notional*, or *Commission*.
- **Ticket Aggregation:** Allows you to send orders with matching sides, securities, and dates to the same broker code. This option works across wheels, so that even if matching orders are routed to different wheels, they still go to the same broker code.
- **Route Basket to a Single Quick Button:** Allows you to send all orders in a basket to the same quick button.

6. Click the **Create** button.

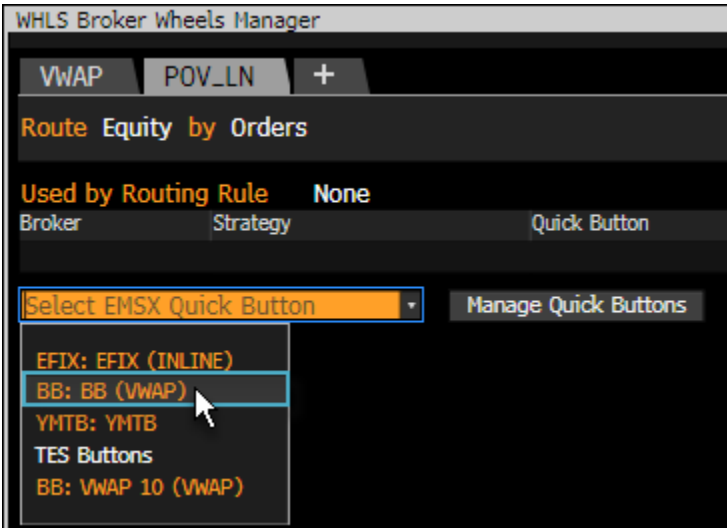

The 'Create Broker Wheel' dialog box contains the following fields and values:

Field	Value
Wheel Name	POV_LN
Asset Class	Equity
Route By	Orders
Ticket Aggregation	No Preferences
Route Basket to Single Quick Button	No

Buttons: Create, Close

The new rule appears as a tab at the top of the *Broker Wheels Manager* window.

7. From the *Select EMSX Quick Button* drop-down menu, select a quick button (e.g., *BB: BB (VWAP)*).

The 'WHL Broker Wheels Manager' window shows the 'POV_LN' tab selected. The 'Route' is set to 'Equity by Orders'. The 'Used by Routing Rule' is 'None'. Below this is a table with columns 'Broker', 'Strategy', and 'Quick Button'. A dropdown menu 'Select EMSX Quick Button' is open, showing options: 'EFIX: EFIX (INLINE)', 'BB: BB (VWAP)' (selected), 'YMTB: YMTB', 'TES Buttons', and 'BB: VWAP 10 (VWAP)'. A 'Manage Quick Buttons' button is also visible.

Note: If a quick button is added to a broker wheel and is later updated in EMSX, the updates are not automatically pulled into the wheel; you must manually remove and re-add the buttons.

The selected quick button(s), broker(s), and strategy information appear. The *Strategy* information is automatically populated based on your selected EMSX quick buttons.

8. If you want to remove a quick button, click the related **delete** icon.

Weight (%)	Orders
33.33	0 
33.33	0 
33.33	0 

The quick button is removed.

9. If you want to assign a new weight to each broker in the wheel, enter a value in the related weight field. By default, all brokers are equally weighted.

Weight (%)	Orders
50	0
25	0
25	0
Total	100/100

10. Click the **Save** button.

The wheel saves and can be applied to an autorouting rule.

Applying Automation Suitable

You can discover rule conditions that would have triggered autorouting for orders in your *Execution Management System* (EMSX) blotter to help streamline your workflow.

For more on the methodology used to identify suitable rule conditions: [Automation Suitable Methodology](#).

Steps:

1. From the toolbar, select **Create Rule > Autorouting**.

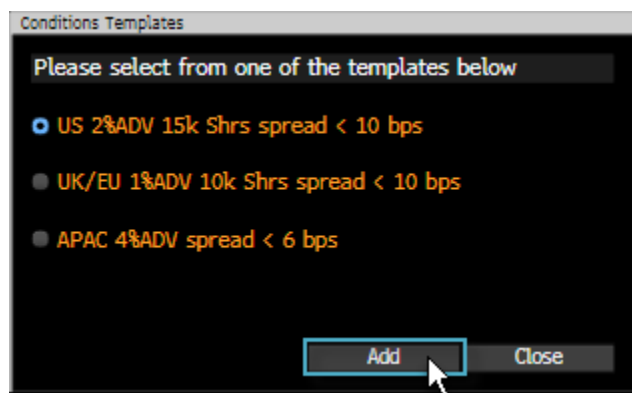

The *Rule Builder: Create Rule* screen appears.

2. In the *Select a Condition* section, click the **Select a Template** button.

The *Conditions Template* window appears.

3. Select the rule condition template(s) you want to add to your rule (e.g., *US 2%ADV 15k 5hrs spread < 10 bps*), then click the **Add** button.

The *Conditions Template* window closes, and the screen updates with your rule conditions.

Your rule conditions are included in the rule.

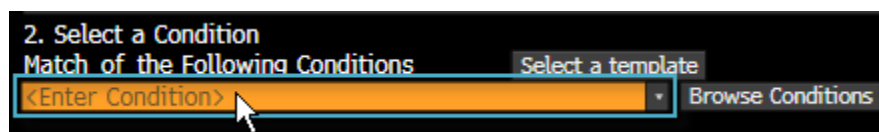

Searching for Conditions

When creating alert or routing rules for equities, you can search for conditions by typing keywords into an autocomplete search bar, so you can quickly add the conditions you need.

For more on creating rules: [Creating Alert Rules](#), [Creating Routing Rules](#).

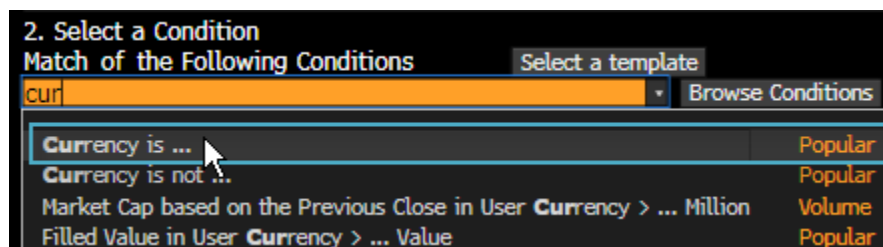

Steps:

1. From the *Rule Builder: Create Rule* screen, in the *Select a Condition* section, click the amber search bar.

A drop-down menu with suggested conditions appears.

2. Start typing a condition, then select the option that best matches your criteria (e.g., *Currency Is...*).

[Hint] You can view and select from the full list of available conditions by clicking the *Browse Conditions* button.

The condition's additional fields and a new autocomplete search bar appear.

3. In the additional fields, specify the condition's criteria.

4. If you want to add another condition, repeat steps 1-3.
5. Finish creating the rule.

Your rule saves with the specified conditions.

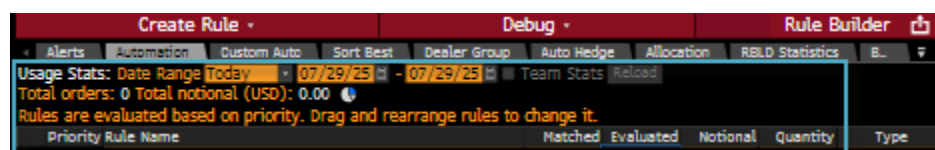

Usage Statistics

You can assess automation activity by analyzing rule usage statistics, which summarize autorouting rule performance and related activity. The following topics describe how to access the usage data for your rules.

Evaluating Usage Statistics

On the *Automation* tab, RBLD administrators can review the performance of their individual and team rules to assess their effectiveness.

For examples of employing usage statistics in your evaluation: [Usage Statistics Examples](#).

The following fields, buttons and columns provide insight into the efficacy of your rules:

- **Date Range:** Select the date range to evaluate.
- **Team Stats:** Select to review statistics for your team's rules. If unchecked, only your rules are evaluated.
- **Total Orders:** The number of orders matched in the specified date range.
- **Pie Chart:** Click to review your statistics in a pie chart.
- **Matched:** The number of orders that matched the rule.
- **Evaluated:** The number of orders evaluated against the rule.
- **Notional:** The value of the orders that matched the rule.
- **Quantity:** The total quantity routed by the rule.

Usage Statistics Examples

Admins can access usage statistics to gain insight into the performance of your order routing rules to understand rule performance, team activities, and asset-specific evaluation.

The following examples demonstrate how usage statistics can be used to measure individual and team rule effectiveness.

Assessing RBLD Admin Rules

Admins can access an overview of their rule performance with the following fields:

At the top of the screen, you can use the following fields to configure your statistics, then review the aggregated data:

- **Date Range:** From the drop-down menu, select a date range, or choose custom and enter the range in the date fields.
- **Total Orders:** Displays the number of orders matched by RBLD rules in the selected date range.
- **Total Notional (USD):** Displays the total value of orders that matched a RBLD rule in the selected date range.

For each individual rule, you can use the following columns to see the statistics:

Rule Name	Enabled	Matched	Evaluated	Notional	Quantity
USD Credit-team rule	☐	1	6	500k	500,000 F
Continuous limit-team rule	☐	--	--	--	-- F
Delay 1 min-team rule	☐	1	3	0	0 F
NY close-team rule	☐	--	--	--	-- F
<1M Auto-team rule	☒	1	1	117.14k	100,000 F
UST re-try second attempt-team rule	☐	--	--	--	-- F
>1M one click-team rule	☐	--	--	--	-- F
CFETS Autorouting-team rule	☐	--	--	--	-- F
NDF and NDS-team rule	☐	0	27	0	0 F
FX below 100K AUTO-team rule	☒	43	80	2.6M	2,481,000 F
FX above 100K one click-team rule	☒	26	37	40.61M	40,580,000 F
DRQS-Prod-team rule	☐	--	--	--	-- F

- **Matched:** Shows the number of orders that matched the rule.
- **Evaluated:** Displays the number of orders evaluated against the rule.
- **Notional:** Shows the value of the orders that matched the rule.
- **Quantity:** Displays the total quantity routed by the rule.

Evaluating Team Member Statistics

Admins can check the *Team Stats* checkbox to monitor rule activity per asset class for each team member. For example, if the Admin trades in equity and foreign exchange instruments, but a team member trades in equity and fixed income, the Admin can also see their statistics.

Note: The data in the *Total Orders* and *Total Notional* fields update dynamically to reflect the rules of the entire team.

Admins can access an overview of their rule performance by accessing the following fields:

- **Team Stats:** Include statistics for the entire team's rules.
- **Total Orders:** Displays the number of orders matched by RBLD rules in the selected date range for the team.
- **Total Notional (USD):** Displays the total value of orders that matched a RBLD rule in the selected date range for the team.

Create Rule • Manage Wheels Settings Debug • Rule Builder					
Usage Stats: Date Range Last 30 D 08/07/25 - 09/05/25 Team Stats Reload					
Total orders: 116 Total notional (USD): 356,853,171.13					
Rules are evaluated based on priority. Drag and rearrange rules to change it.					
Rule Name	Matched	Evaluated	Notional	Quantity	Team: SAM_AUTO
UST <1MM AUTO-team rule	11	39	2.7M	2,700,000	RBLD AUTOMATI
UST >1MM ONE CLICK-team rule	19	41	191M	191,000,000	RBLD AUTOMATI
USD Credit-team rule	1	6	500k	500,000	RBLD AUTOMATI
Continuous limit-team rule	--	--	--	--	RBLD AUTOMATI

- **Matched:** Shows the number of orders that matched the rule.
- **Evaluated:** Displays the number of orders evaluated against the rule.
- **Notional:** Shows the value of the orders that matched the rule.
- **Quantity:** Displays the total quantity routed by the rule.

Filtering by Asset Class

In the *Asset Class* column, you can apply a filter to focus on a specific asset class.

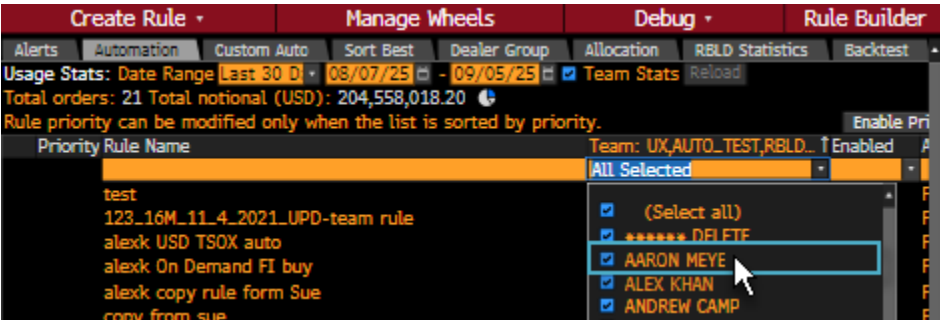

Note: The *Total Orders* and *Total Notional (USD)* fields update to reflect your selection.

Create Rule • Manage Wheels Settings Debug • Rule Builder					
Usage Stats: Date Range Last 30 D 08/07/25 - 09/05/25 Team Stats Reload					
Total orders: 116 Total notional (USD): 356,853,171.13					
priority can be modified only when the list is sorted by priority.					
Rule Name	Asset Class	Matched	Evaluated	Notional	
dfd-master rule	(Select all)	--	--	--	
simple test-master rule	Equity	--	--	--	
1 UST <1MM AUTO-team rule	Fixed Income	11	39	2.7M	
2 UST >1MM ONE CLICK-team rule	Foreign Exchange	19	41	191M	
3 USD Credit-team rule		1	6	500k	

Filtering by Team

In the *Team* column, you can apply a filter to focus on a specific team.

Note: The *Total Orders* and *Total Notional (USD)* fields update to reflect your selection.

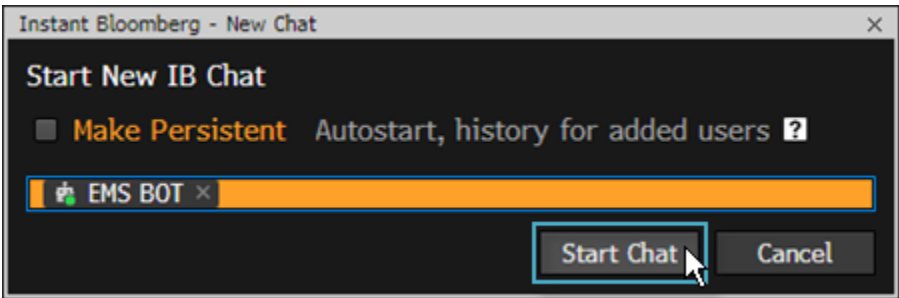

Reviewing Automation in IB

In the *Instant Bloomberg®* (IB) function, you can request real-time automation data from a chatbot, so you can quickly review and analyze your automation execution workflows.

Note: You must have permission to access the chatbot in IB. For more information, contact your Bloomberg Account Representative.

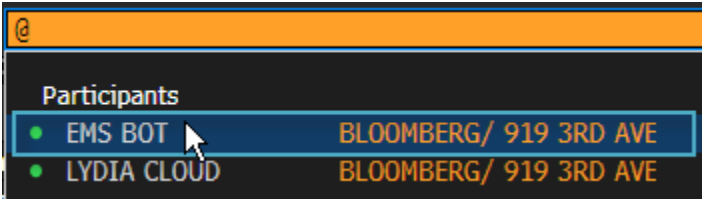

Steps:

1. While starting a new chat in IB, search for and select **EMS BOT**. Then, click the **Start Chat** button. For more on creating chats: [IB Help Page > Creating a Transient Chat](#).

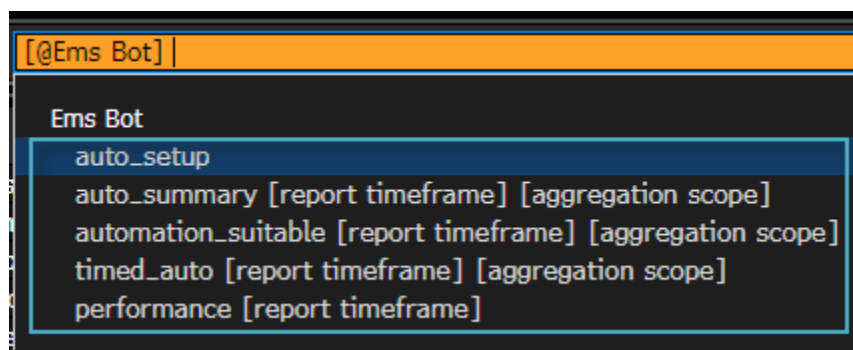

The chat opens.

2. In the text entry field, enter @, then select **EMS BOT**.

A drop-down menu with available commands appears.

3. Select a command:

- **Auto_Setup:** Display autorouting group configuration and permissions.
- **Auto_Summary:** See aggregated automation activity for the selected time frame and scope.
- **Automation_Suitable:** Summarize orders marked suitable for automation.
- **Timed_Auto:** Show queued automation schedules and outcomes for upcoming or historical timed executions.
- **Performance:** Review rule-level execution performance and TCA metrics. See implementation shortfall for equities, and percentage executed inside the CBBT for fixed income.

Note: The *Performance* command does not support foreign exchange data.

Based on your selection, additional parameters may appear.

[Hint] You can jump to the next parameter by pressing tab.

4. If you selected a command with the *[Report Timeframe]* parameter, replace the parameter text with one of the following:

- **Today:** Pull all available data for the day.
- **Week:** Pull data from the week to date.
- **Month:** Pull data from the month to date.

5. If you selected a command with the *[Aggregation Scope]* parameter, replace the parameter text with one of the following:

- **Trader:** Pulls your own data.
- **Desk:** Pulls data from your group, as configured in the *RBLD Permissions Manager* (AUTO) function.
- **UUID:** Pulls data from the trader whose UUID you specify.

Note: You must be an AUTO administrator to pull data from a desk or UUID.

6. Press <GO>.

The message is sent and the chatbot responds with the requested data.

Reference

Automation Suitable Methodology

The Automation Suitable tool in the Rule Builder Assist suite identifies automation opportunities using statistical analysis for orders in your *Execution Management System* (EMSX) blotter, so you can streamline your trading workflow.

The tool notifies the user in the EMSX blotter that an order that was not automatically routed is suitable for automation.

For equities, the following criteria are included in the statistical analysis to determine that an order is automation suitable:

- Number of shares
- Relative order size
- Bid/ask spread

Case Studies

The following documents provide additional information about Rule Builder (RBLD) for equities and related functionality.

Type	Title	Description
	RBLD Rule Builder Blue Lake Partners Case Study	A case study that describes how Blue Lake Partners used RBLD to overcome a number of operational pain points their two main traders were experiencing.
	The Guardians RBLD Case Study	A case study that describes how The Guardians of New Zealand Superannuation used RBLD to optimize time-sensitive trading using automation.

Brochures

The following documents provide additional information about RBLD and related functionality.

Type	Title	Description
	Equity Automation Performance & Best Execution Report	A case study that describes how RBLD can improve your operational efficiency and execution.
	Bloomberg Rule Builder Timed Automation Guide - English	An overview of the Timed Automation (Delayed Autorouting) workflow.

Definitions

Term	Definition
AIM Account	A rule condition that allows you to apply rule conditions based on whether or not specific Asset and Investment Manager (AIM) accounts are included in the order. This condition is only available for AIM clients.
Change	The change that was made to the rule.
D	Allows you to delete the corresponding rule.
Date	The date on which the rule was changed.
Dealer Performance	A dealer selection criteria that provides performance metric controls.
E	Allows you to edit the corresponding rule.
Else	The tag that appears in a BTCA or EMSX column by default (when the selected rule's conditions are not met). For more on using BTCA or EMSX: BTCA Help Page and EMSX Help Page .
Enable	Allows you to enable or disable the selected rule. A checkmark indicates that the rule is enabled.
Hit Ratio: % Exec	A dealer performance metric that allows you to filter dealers by percent of tickets executed relative to the volume attempted. For multi-dealer inquiries only, attempts that led to an actual execution with a dealer are included. If this term appears as a column header, it indicates the specific value for the dealer.
Hit Ratio: % Vol Exec	A dealer performance metric that allows you to filter dealers by the percent of volume executed relative to the volume attempted. For multi-dealer inquiries only, attempts that led to an actual execution with a dealer are included. If this term appears as a column header, it indicates the specific value for the dealer.
My Rules	Displays your existing rules and allows you to enable, disable, edit, or delete specific rules.
Name	The name assigned to the rule.
Price Close Inside Tolerance Band	A rule condition that allows you to specify a % tolerance band that is applied to yesterday's close bid and ask to create tolerance bid and ask levels. RBLD evaluates incoming orders against the tolerance to determine whether automation can proceed. For buy orders, the current market ask must be less than the tolerance ask. For sell orders, the current market bid must be greater than the tolerance bid. This condition only applies to fixed income orders routed through TSOX.
Responsiveness: % Quit	A dealer performance metric that allows you to filter dealers by the percent of occurrences (tickets) in which a dealer rejects a trade request or allows it to expire. If this term appears as a column header, it indicates the specific value for the dealer.
Responsiveness: % Tied Tr-Awy	A dealer performance metric that allows you to filter by percent of tickets tied/traded away relative to tickets attempted and executed (done tickets). If this term appears as a column header, it indicates the specific value for the dealer.
Responsiveness: % Vol Tr-Awy	A dealer performance metric that allows you to filter by the percent of volume tied/traded away relative to the volume attempted and executed (done tickets). If this term appears as a column header, it indicates the specific value for the dealer.

Term	Definition
Rule Name	The name assigned to the rule.
Slippage: % Slip	A dealer performance metric that allows you to filter dealers by the occurrences when the executable price provided is less favorable relative to the MPF-indicative price at the time of inquiry. This only applies to corporate bond securities.
Slippage: % Vol Wtd Slip	A dealer performance metric that allows you to filter dealers by the percentage difference between the dealer MPF ticked price and dealer AEP execution price returned as part of an inquiry. This only applies to corporate bond securities.
Text if true	The tag that appears in a BTCA or EMSX column when the selected rule's conditions are met. For more on using BTCA or EMSX: BTCA Help Page and EMSX Help Page .
Time	The time at which the rule was changed.
View Rule	Allows you to access the historical rule.

Take the next step.
